

APPENDIX “F”
FINANCIAL TRENDS MONITORING SYSTEM
FY 2008 - 2018

Note to the reader:

The County of Henrico compiles the Financial Trend Monitoring System (Trends) annually as a means of reviewing historical financial and demographic data prior to composing the annual budget. In completing the Trends document, an extensive review of the County’s financial history over the preceding eleven fiscal years is performed using a series of twenty-eight key economic, demographic, and budgetary factors. By reviewing historical actuals over an extensive period of time, long ago forgotten financial impacts may be reviewed for validity to current economic conditions and variables. This marks the twenty-fifth year of this financial trend analysis.

Completing the Trends document is one of the first steps in Henrico County’s annual budgetary process. The findings that emerge from this review form the foundation on which budget recommendations are planned and created. The County Manager presents the final Trends Document to the Board of Supervisors prior to the recommended operating and capital budgets. This provides the Board the opportunity to undertake an extensive review of the data, allowing them to make the sort of informed and proactive decisions that have led to Henrico’s premier reputation for planning and financial management.

The Trends document is included in the County’s Approved Annual Fiscal Plan to provide the reader with a historical perspective, and thus a more full understanding of the economic, demographic and financial factors that have been accounted for in the process of approving this document.

What follows is a reproduction of the original Trends document for the period of FY 2008 – 2018 that was presented by the County Manager to the Board of Supervisors on February 26, 2019.

THE FINANCIAL TREND MONITORING SYSTEM

Financial Condition

Financial condition is broadly defined as the ability of a locality to maintain existing service levels, withstand local and regional economic disruptions, and meet the demands of natural growth, decline, and change.

The ability to maintain existing service levels means more than the ability to pay for services currently being provided. It also means the ability to maintain programs in the future that are currently funded from external sources such as state or federal grants where the support is likely to diminish, and where the service cannot practically be eliminated when the funds do disappear. It also includes the ability to maintain capital facilities, such as roads and buildings, in a manner that would protect the initial investment in them and keep them in usable condition. Finally, it includes the ability to provide funds for future liabilities that may currently be unfunded, such as pension, employee leave, and debt commitments.

The ability to withstand local, regional, and national economic disruptions is also important because these disruptions may have a major impact on the businesses and individuals who live and work in the locality, and therefore impact the locality's ability to generate new local tax dollars.

This leads to the third component of the definition of financial condition, which is **the ability to meet the future demands of change**. As time passes, localities grow, shrink or stay the same size. Each condition has its own set of financial pressures. Growth, for example, can force a locality to rapidly assume new debt to finance roads and public facilities, or it can cause a sudden increase in the operating budget to provide necessary services. Shrinkage, on the other hand, leaves a locality with the same number of roads and public facilities to maintain but with fewer people to pay for them.

The Financial Trend Monitoring System

The Financial Trend Monitoring System (FTMS), adapted from the system developed by the International City/County Management Association (ICMA), "identifies the factors that affect financial condition and arranges them in a rational order so that they can be more easily analyzed and measured." It is a management tool that pulls together the pertinent information from the County's budgetary and financial reports, mixes it with the appropriate economic and demographic data, and creates a series of local government financial indicators that, when plotted over a period of time, can be used to monitor changes in financial condition. The financial indicators include such things as cash liquidity, level of business activities, changes in fund balance, and external revenue dependencies. This system can also assist the Board of Supervisors in setting long-range policy priorities and can provide a logical way of introducing long-range considerations into the annual budget process. The following discussion has been developed using the ICMA manual entitled Evaluating Financial Condition, A Handbook for Local Government.

The FTMS is built on twelve overall "factors" that represent the primary forces that influence financial condition (see Chart 1). These financial condition factors are then associated with twenty-eight "indicators" that measure different aspects of these factors. Once developed, these can be used to monitor changes in the factors, or more importantly, to monitor changes in financial condition. Each factor is classified as an environmental factor, an organizational factor or a financial factor.

The **environmental factors** affect a locality in two ways. First, they create demands. Second, they provide resources. Underlying an analysis of the effect the environmental factors have on financial condition is the question: "Do they provide enough resources to pay for the demands they make?"

The **organizational factors** are the responses the government makes to changes in the environmental factors. It may be assumed in theory that any government can remain in good financial condition if it makes the proper organizational response to adverse conditions by reducing services, increasing efficiency, raising taxes, or taking some other appropriate action. This assumes that public officials have enough notice of the problem, understand its nature and magnitude, know what to do and are willing to do it. Underlying an analysis of the effects the organizational factors have on financial condition is the question: "Do legislative policies and management practices provide the opportunity to make the appropriate response to changes in the environment?"

The **financial factors** reflect the condition of the government's internal finances. In some respects, they are a result of the influence of the environmental and organizational factors. If the environment makes greater demands than resources provided and if the County is not effective in making a balanced response, the financial factors would eventually show signs of cash or budgetary problems. In analyzing the effect financial factors have on financial condition, the underlying question is: "Is government paying the full cost of operating without postponing costs to a future period when revenues may not be available to pay these costs?"

Financial Indicators

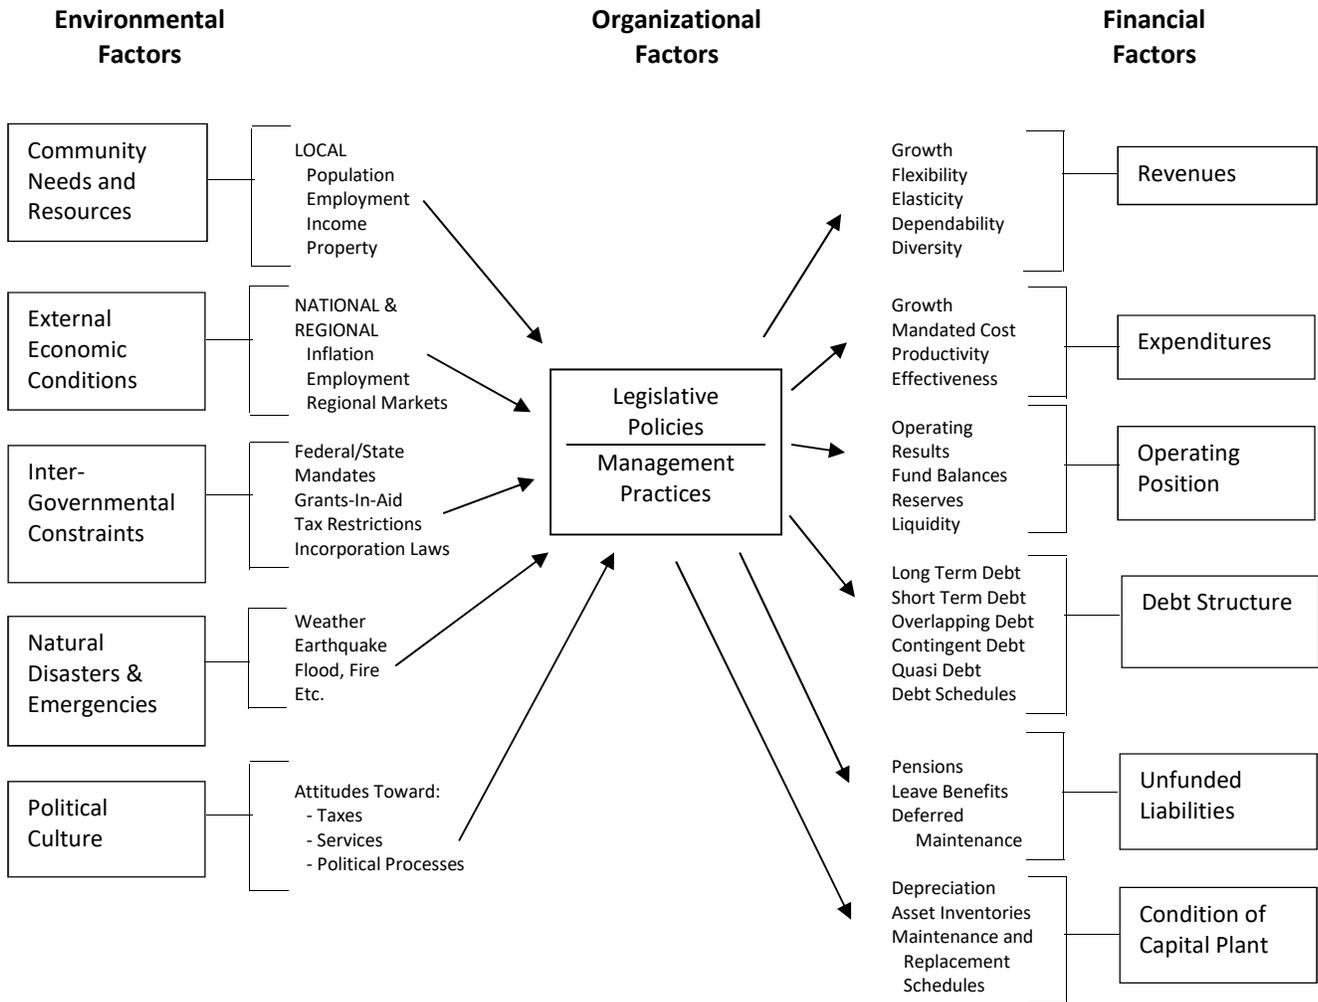

The financial indicators are the primary tools of the Financial Trend Monitoring System. They represent a way to quantify changes in the twelve factors. The chart on page 4 shows the twenty-eight indicators along with the factors with which they are associated. Many aspects of financial condition cannot be measured explicitly; however, by quantifying twenty-eight indicators and plotting them over a period of eleven years, decision makers can begin to monitor and evaluate the County's financial performance. The use of these indicators will not provide answers to why a problem is occurring or what the appropriate solution is, but it may provide the opportunity to make an informed management response.

How to Use This Document

Twenty-eight indicators have been selected for use in monitoring Henrico County's financial condition. They are displayed graphically on the following pages. These indicators were chosen based upon the availability of data and their appropriateness for Henrico County. The indicators selected are grouped by the seven financial factors as illustrated on page 4. The remainder of this document, in fact, is structured into seven sections, one for each of the seven factors. Appendix A provides the raw data used to develop the graphs. Appendix B provides a list of the Economic Data Sources used in the analysis.

FINANCIAL INDICATORS

(Those underlined denote warning trends)

REVENUES

Revenues Per Capita
Intergovernmental Revenues
Elastic Operating Revenues
General Property Tax Revenues
Uncollected Current Property Taxes
User Charge Coverage
Revenue Variance

EXPENDITURES

Expenditures Per Capita
Employees Per Capita
Fringe Benefits

OPERATING POSITION

Operating Surpluses
Enterprise Losses
General Fund Unassigned Balances
Liquidity

DEBT STRUCTURE

Current Liabilities
Long-Term Debt
Debt Service

EMPLOYEE LEAVE

Accumulated Vacation Leave

CONDITION OF CAPITAL PLANT

Level of Capital Outlay
Depreciation

COMMUNITY NEEDS & RESOURCES

Population
Per Capita Income
Public Assistance Recipients
Real Property Values
Residential Development
Employment Base
Business Activity - Local Retail Sales Tax Receipts
and Business License Tax Receipts
Business Activity - Commercial Acres and
Market Value of Business Property

WARNING TREND: Decreasing net operating revenues per capita (constant dollars). Increasing net operating expenditures per capita (constant dollars).

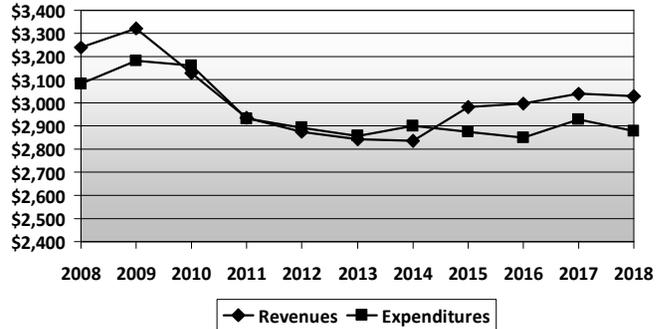

Formula:

$$\frac{\text{Net Operating Revenues/Expenditures}}{\text{Population}}$$

Revenues/Expenditures per Capita (In Constant Dollars)

Revenues and Expenditures Per Capita:

These indicators depict how revenues and expenditures are changing relative to changes in the level of population and inflation. As the population increases, it might be expected that the need for services would increase proportionately; therefore, the level of per capita revenues should remain at least constant in real terms. If per capita revenues are decreasing, it could be expected that the locality would be unable to maintain existing service levels unless it were to find new revenue sources or ways to save money. Increasing per capita expenditures can indicate that the cost of providing services is greater than the community's ability to pay, especially if spending is increasing faster than the community's personal income or other relevant tax base.

Trends:

This indicator considers “Net Operating Revenues/Expenditures” to be revenues and expenditures (on a constant dollar basis) from the General, Special Revenue, and Debt Service funds. Because this indicator combines these operating funds, the representation is somewhat different than those made in the Annual Fiscal Plan, which is fund specific when examining revenue and expenditure growth. In looking at per capita revenues, the most recent fiscal year, FY18, reflected a 0.3 percent decrease – the first after three consecutive years of constant dollar increases. While there was a decrease on a constant dollar basis, operating revenues increased 3.4 percent. However, this growth did not exceed the combination of population growth of 0.9 percent and inflation of 3.1 percent in FY18. As a note, the other decreases in per capita revenues (constant dollar) noted in FY08 and from FY10 through FY14 are the only such year-over-year declines in this indicator since it began being tracked in 1982, pointing to the severity of the Great Recession.

The FY18 per capita revenue figure reflects the fourth full fiscal year recognition of the County’s 4.0 percent meals tax, which generated just over \$29.3 million in FY18, all of which was dedicated to the County’s school system. Of the \$29.3 million in meals tax receipts collected in FY18, \$9.0 million was allocated to the operating budget of the County’s school system, while the balance of \$20.3 million was dedicated to pay-as-you-go capital budget needs for County schools, expenditures that are not captured in this indicator. Including meals tax receipts, total General Fund revenues grew by \$23.0 million in FY18 (current dollars) and Special Revenue Fund revenues, which mostly reflect State and Federal grant funding, increased by \$3.1 million (current dollars), yielding total revenue growth of \$26.1 million in current dollars for FY18, as compared to FY17.

In looking at expenditures per capita (constant dollar), the County experienced a year-over-year decrease of 1.7 percent in FY18. Looking at the longer-term constant dollar trend, expenditures per capita have decreased by 6.5 percent since FY08.

In examining the data, a few distinct trends are evident. First, from FY09 to FY14, the County’s constant dollar per capita revenues dropped by 14.6 percent. In part spurred by the implementation of the Meals Tax, late in FY14, the trend reversed, and per capita revenue grew by 6.8 percent from FY14 to FY18. By contrast, while constant dollar expenditures mirrored the revenue decrease from FY09 to FY14, noted above, they have dropped by an additional 0.7 percent in the FY14 to FY18 time period. This shows that the series of sustainable expense reduction initiatives

that were implemented by the County to adapt to the recession have been maintained in the recent period of economic growth. It should be noted that from FY08 to FY18, the County's population grew by 10.8 percent.

As the County's economy and revenue streams continue growing, a myriad of positive local, state and national economic data allows for an optimistic outlook regarding the County's local revenue streams. While there are plenty of positive signs within local revenues, real estate assessment growth will not return to that seen during 2003 to 2009 period because of the unsustainable housing bubble from 1995-2006 that artificially propped up real estate prices. We also anticipate that State revenues will remain relatively stagnant in the short term due to other funding priorities of the General Assembly. Real estate tax revenues and State Aid, combined, account for approximately two-thirds of all County General Fund revenues. Henrico's cautious outlook towards State revenues notwithstanding, the recent trend from FY15 to FY18 for local revenues has shown a healthy rate of growth, which exceeds population and inflation growth. However, to avoid becoming complacent, the County will continue to add fiscal structure within the budget process, minimizing one-time resources and investing in core services – particularly Education and Public Safety. The County must also continue to explore innovative ways to provide the highest level of service at the lowest possible cost. Despite the challenges noted herein, the structural additions, strategic expenditure reductions, and solid local revenue growth, have placed the County in an overall positive fiscal environment. While expenditures per capita generally outpaced revenues per capita in the FY10 to FY14 timeframe, that trend has been reversed in the time since, with per capita revenues comfortably outpacing per capita expenses from FY15 to FY18. Therefore, no warning trend is noted for this indicator.

WARNING TREND: Increasing amount of intergovernmental operating revenues as a percentage of gross operating revenues.

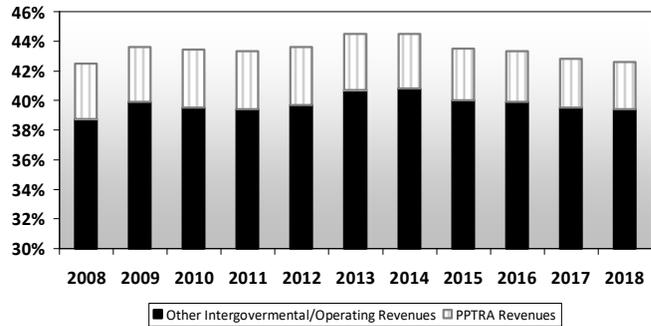

Formula:

$$\frac{\text{Intergovernmental Operating Revenues}}{\text{Gross Operating Revenues}}$$

Intergovernmental Revenues (as a % of Gross Operating Revenues)

Intergovernmental Revenues:

Intergovernmental revenues are those revenues received from other governmental entities. The sources of intergovernmental revenue in Henrico County include revenue from the Commonwealth of Virginia and the Federal Government. For example, in the General Fund the County receives a portion of the State Gasoline Tax revenue it generates for street maintenance and construction, as well as State and Federal revenue for schools and a partial reimbursement from the State Compensation Board for salaries and office expenses for Constitutional Officers. In the Special Revenue Fund, the County receives State and Federal revenue for various grant programs for schools, mental health, social services and public safety. Much of this intergovernmental revenue is restricted revenue, and therefore legally earmarked for a specific use as required by State and Federal law or grant requirements. Beginning in 1999, personal property tax payments paid by the State under the Personal Property Tax Relief Act (PPTRA) have been classified as intergovernmental revenues even though the assessment function is performed at the local level. In the graph above, PPTRA revenues appear as the top stacked bar.

An overdependence on intergovernmental revenues can have an adverse impact on the County's financial condition. The "strings" that the external source attaches to these revenues may prove too costly, especially if these conditions are changed in the future after the locality has developed a dependence on the program. In addition, the external source may withdraw the funds and leave the locality with the dilemma of cutting programs or paying for them with General Fund resources.

Trends:

As the graph above indicates, Henrico County's intergovernmental revenues as a percentage of operating revenues increased from 42.5 percent in FY08 to 44.5 percent in FY14, and then reversed course, dropping to 42.6 percent in FY18. The peak in this indicator is FY14 and largely arose from additional State Aid for education in FY13 and a large increase in Gas Tax funding in FY14. These factors caused intergovernmental revenues to outpace growth in local revenues, primarily real estate tax revenues. FY18 was also the fourth full-year that recognized the County's 4.0 percent meals tax, which has generated \$112.6 million of local revenue for the county's school system since FY15. As mentioned above, the State began reimbursing localities under the PPTRA in FY00. The graph above delineates between PPTRA reimbursements and all other intergovernmental revenues. The total bars reflect all intergovernmental revenues, while the lower stacked bars exclude the effects of PPTRA payments.

While intergovernmental revenue has increased substantially over the eleven-year period examined, there are two distinct patterns that need to be noted, as the increase is largely misleading. Starting in FY05 and extending through FY09, Henrico County was awarded annual discretionary State Lottery funds of more than \$5.0 million for Education, funds that Henrico used solely for Education construction projects were not factored into this indicator. This decision was based on the premise that, if in the future, the State reduced lottery funds for Education - the County's operating budget would not be impacted in a negative manner. As such, an operational dependence was not created for this revenue source. The significance of this decision was realized in FY10, as discretionary lottery funds were significantly

reduced to \$3.2 million from \$5.7 million received the previous fiscal year. In FY11, the entire discretionary allocation of lottery funds was eliminated, as the State began utilizing lottery proceeds to supplant reductions to specific Education programs formerly funded with General Fund dollars. In the 2016 Legislative Session, the General Assembly’s Adopted Biennial Budget included the return of discretionary lottery funding. While the County did not include lottery funding in the adoption of the FY17 budget, this funding stream was eventually utilized by HCPS to fill a funding gap that was the result of missing enrollment projections by over 500 students for that fiscal year.

The second trend reflects the reclassification of prior local revenues as “state” revenues, and while overall State aid looks like it increased from FY08 to FY09, the increase is somewhat misleading. One example that depicts why these increases are misleading is **legislation that replaced four local revenue sources** with a monthly payment from the State Department of Taxation, known as the Communication Sales & Use Tax, which became effective January 1, 2007 and was supposed to be “revenue neutral.” The following local revenue sources were replaced: **Consumer Utility Tax, Cable TV Franchise Fee, Cellular Telephone Tax, and E-911 Tax**. This legislation distributes funding using a formula that has impacted Henrico’s receipts, and has not proved to be revenue neutral as assumed in the legislation, as is demonstrated in the table below. The State deducts an administrative fee from the revenue collections and redistributes the funding monthly to localities as a fixed percentage of State-wide collections, which was established by FY06 local collection levels.

Fiscal Year	Local Revenue Collection	Communications Sales & Use Tax Collection
FY06	\$14,260,480	\$0
FY07	\$9,662,975	\$5,792,982
FY08	\$0	\$15,088,668
FY09	\$0	\$13,709,408
FY10	\$0	\$13,766,559
FY11	\$0	\$13,698,421
FY12	\$0	\$13,243,471
FY13	\$0	\$12,359,303
FY14	\$0	\$13,226,685
FY15	\$0	\$13,111,116
FY16	\$0	\$12,722,974
FY17	\$0	\$12,410,247
FY18	\$0	\$12,022,278

This is noted because it represents an example of the State’s continued forays into issues of local taxing authority. This concern of State involvement in local revenues continues to be noted as a concern, as it is a significant wildcard in the County’s multi-year financial planning efforts.

As mentioned, creating a dependency on a revenue source not controlled locally may create fiscal difficulties if that revenue source is altered. This is exactly what has occurred with the PPTRA revenue paid by the State. In FY00, the Virginia General Assembly made a commitment to reimburse localities for a State tax reduction of a local revenue source (individual personal property). Since FY00, the County of Henrico has built a dependency on this revenue source and every Trends document since then has included a warning for this indicator.

In the 2004 session of the Virginia General Assembly, the legislature made a materially adverse change to PPTRA payments – effective for FY06. The legislature capped the State’s PPTRA payments to localities at approximately \$950.0 million and used a pro-rata distribution mechanism for making these payments in the future. Meaning that Henrico’s PPTRA reimbursements from the State remain at a level amount, while the taxpayer pays more to the

County. The State's promise of maintaining reimbursement levels at 70.0 percent for the County's taxpayers slipped to 52.0 percent in 2018. As noted earlier, the differential is paid by the County's taxpayers.

From FY08 through FY11, the State cut billions of dollars from its budgets, most of which resulted in reductions in State aid to localities. In fact, from FY08 through FY11, the State reduced aid to Henrico County by more than \$46.0 million in the General Fund alone, most of which was targeted at State Aid for Education. In addition, the County received more than \$28 million in one-time ARRA – Federal Stimulus funds from the State from FY09 through FY11, used by the State to supplant payments to localities for Education, the Sheriff's Office, and Social Services to offset State General Fund reductions. FY11 was the last year that ARRA – Federal Stimulus funds could be utilized by the State, and in FY12, the State was forced to identify revenue increment to cover the loss of one-time funds.

In the spring of 2014, the State identified a "shortfall" of revenues as a result of the impact of Federal sequestration, resulting in reductions in funding to localities across the State. While the State missed its revenue projections for FY14 and substantially adjusted revenue expectations for FY15 mid-year, revenue projections from the Commonwealth remained alarmingly healthy. As feared, at the end of FY16, the State announced that while its revenues grew, they would again fall short of revenue projections. This created a \$1.5 billion "shortfall" for the Commonwealth – the result of continued struggles with accurately projecting their revenues. Accordingly, Henrico County continues to be exceptionally cautious when it comes to estimating revenues from the Commonwealth.

With the implementation of the County's meals tax along with growth in other local revenues, some of the County's reliance on State aid has been alleviated. However, the fact remains that State revenues represent a large portion of the County's operating revenues and if the Commonwealth struggles with their fiscal picture, a warning trend must continue for this indicator.

WARNING TREND: Decreasing (or unplanned) amount of elastic operating revenues as a percentage of net operating revenues.

Formula:

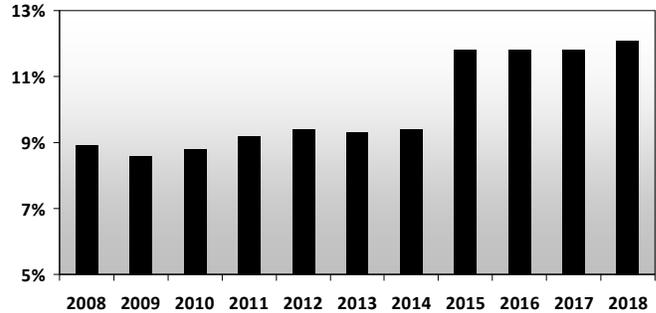

$$\frac{\text{Elastic Operating Revenues}}{\text{Net Operating Revenues}}$$

Elastic Operating Revenues (as a % of Net Operating Revenues)

Elastic Operating Revenues:

Elastic operating revenues are those that are highly responsive to changes in the economic base and inflation. The highly elastic revenue categories used for this indicator are:

- Local sales and use taxes;
- Business and professional license taxes;
- Structure and equipment permit fees; and
- Food and beverage tax, more commonly known as a “meals tax”.

It is to a locality's advantage to have a balance between elastic and inelastic revenues to mitigate the effects of economic growth or decline. The relationship between elastic revenues and total receipts is largely driven by consumer consumption. During an economic downturn, elastic revenues are expected to decrease as a percentage of net operating revenues.

Trends:

The graph shown above indicates that the percentage of elastic tax revenues for Henrico County have increased from a low of 8.6 percent in FY09 to a high of 12.1 percent in FY18. The sharp increase from FY14 to FY15 was primarily the result of the first full-year implementation of the County’s 4.0 percent meals tax, which generated \$26.8 million in FY15. Similar results were recognized in FY16, FY17 and FY18, with collections of \$28.1 million, \$28.4 million and \$29.3 million, respectively. More recently, elastic operating revenues as a percent of net operating revenues have remained relatively stable, ranging from 11.8 to 12.1 percent over the past four years. In addition to meals tax receipts, sales tax receipts grew 5.6 percent in FY18. Business and Professional License (BPOL) Tax receipts grew by 0.5 percent in FY18. The growth in this revenue was concurrent with the Board of Supervisors having doubled the BPOL exemption as part of the FY18 budget, increasing it from \$100,000 to \$200,000 in an effort to make Henrico even more attractive to businesses searching for a location. Due to robust building activity and very significant economic development in Henrico County, highlighted by the Facebook data center, Structure and Equipment Permit revenue grew by 101.4 percent over FY17 levels. In looking at all elastic tax revenues, the County experienced an increase of \$9.0 million or 6.8 percent in FY18.

As a result of economic expansion from FY93 through FY01, the Board of Supervisors implemented a Business and Professional License Tax (BPOL) reduction strategy as a means of encouraging more businesses to locate in Henrico County. That strategy was initiated in January 1996 and was phased in over a period of years. By January 2000, this tax reduction strategy fully exempted the first \$100,000 in gross receipts from taxation for County businesses and established a uniform maximum tax rate of \$.20/\$100 for County businesses. While the tax reduction did impact this indicator, it has had two beneficial impacts. First, due to the phase-in of the Board’s BPOL tax reduction strategy, Henrico reduced its operating reliance on these elastic revenues prior to the actual recession of FY02. Second, commercial taxpayers do not require the same service levels as residential taxpayers, so a net benefit to the County’s revenues has been achieved by attracting more businesses to Henrico. The amount of the exemption was raised from \$200,000 to \$300,000 in the FY19 budget, marking the second consecutive year of a \$100,000 increase in the exemption. The amount of the exemption will continue to be explored as an economic development and tax relief strategy.

Another positive note, Henrico County ranked third among all localities in Virginia for total taxable sales in 2017, behind only Fairfax and Loudoun counties. More significantly though, when looking at the ten largest generators of taxable sales, **Henrico ranks first for taxable sales per capita by a margin of 20.4 percent.** Refer to the chart below for comparisons to other localities.

Rank	Locality	2016 Taxable Sales	Population	Per Capita
1	Henrico County	\$5,656,712,509	324,395	\$17,438
2	Chesapeake City	3,514,278,566	242,655	14,483
3	Loudoun County	5,697,354,606	396,068	14,385
4	Arlington County	3,258,772,638	239,074	13,631
5	Fairfax County	14,939,828,530	1,143,429	13,066
6	Chesterfield County	4,394,824,320	340,020	12,925
7	Virginia Beach City	5,597,203,814	454,448	12,316
8	Prince William County	5,540,880,714	455,990	12,151
9	Richmond City	2,699,889,890	222,853	12,115
10	Norfolk City	2,800,002,004	246,256	11,370

Encouraging local economic trends and continued elastic revenue growth indicate a solid turnaround in the local economy. That being said, on average the United States economy has experienced a recession every five to six years and is now past the ten-year mark since the beginning of the last recession. Further, the General Assembly continues to look for ways to reform the BPOL tax in an attempt to reduce business taxes, which would be to the detriment to localities. So, while local economic growth has continued its positive trend, the County must remain diligent and exercise fiscal prudence when estimating elastic resources to mitigate reliance on these resources and quickly adapt to changing economic conditions. Nonetheless, with growth continuing in all the elastic measures, no warning trend is warranted for the indicator.

WARNING TREND: Decreasing or negative growth in general property tax revenues (constant dollars).

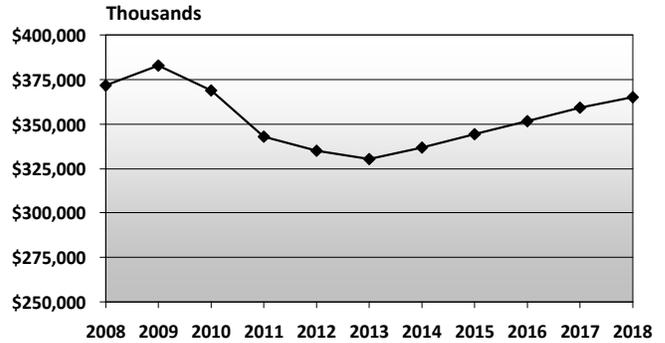

Formula:

Property Tax Revenues (Constant Dollars)

General Property Tax Revenue (In Constant Dollars)

General Property Tax Revenues:

General property tax revenues in Henrico County include both current and delinquent real and personal property tax revenue levied and collected by the County. These revenues constitute Henrico County's largest local revenue category, representing 66.0 percent of total **local** operating revenue in Henrico County in FY18. It should be noted that beginning with FY99, the State's reimbursements of personal property tax revenues have been recorded as "intergovernmental" revenue. That is to say, the PPTRA revenue is not reflected on this indicator. This indicator does capture the "local" component of personal property – including the machinery and tools tax.

Trends:

Henrico County has experienced an overall healthy increase in general property tax revenues over the last eleven years. In unadjusted dollars, general property tax revenue has increased from \$368.0 million in FY08 to \$420.8 million in FY18, representing an average annual increase of 1.4 percent over this eleven-year period.

Henrico's strong local economy and community of choice designation for new area residents and businesses have had a positive impact on the County's real property assessed valuations over the past eleven years. During this time between CY08 and CY18, the County's unadjusted real estate tax base has increased by \$3.3 billion. It is also noted that when looking at these property tax revenues and comparing them to total net revenues, a revealing pattern emerges. Beginning in 1999, personal property tax payments paid by the State under the Personal Property Tax Relief Act (PPTRA) have been classified as intergovernmental revenues even though the assessment function is performed at the local level. After capping PPTRA payments at \$37.0 million annually for Henrico County, property tax revenues as a percentage of net operating revenues increased from 37.1 percent in FY06 to 38.3 percent in FY10. Due to the economic downturn, particularly the impact on real estate values, this indicator dropped four consecutive years, to 36.5 percent in FY13. The percentage dropped further, to 35.5 percent in FY15 due to the inception of Meals Tax Revenues. In the time since, the measure has rebounded to 36.0 percent in FY18.

The upward trend of the County's total tax base since FY13 is very positive. In the five years from FY13 to FY18, the constant property values have increased by a total of 23.0 percent. The County's overall tax base for January 2019 reflects a reassessment increase of 4.5 percent. Going forward, the County anticipates continued growth in real estate values, though nothing compared to the growth experienced in the mid-2000's, when property values increased by 76.6 percent from 2003 to 2009. With a sixth consecutive year of overall real estate valuation growth and with personal property tax receipt expected to continue to grow at levels close to inflation, no warning trend is noted for this indicator.

WARNING TREND: Increasing amount of current uncollected property taxes as a percentage of the current total property tax levy.

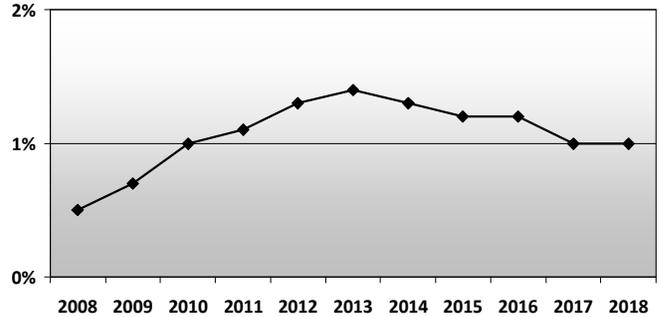

Formula:

$$\frac{\text{Uncollected Current Property Taxes}}{\text{Current Property Tax Levy}}$$

Uncollected Current Property Taxes (as a % of Total Levy)

Uncollected Current Property Taxes:

Every year a certain percentage of current real and personal property taxes go uncollected because property owners are unable to or choose not to pay them. If this percentage increases over time, it may be an indication of an overall decline in a locality's economic health. Bond rating agencies consider that a locality will normally be unable to collect between 2.0 to 3.0 percent of its property tax levy each year. If uncollected property taxes rise to more than 5.0 percent, rating agencies consider this to be a negative indicator that signals potential problems in the stability of the property tax base or is indicative of systemic problems with local tax collection efforts.

Trends:

As the graph above indicates, for this eleven-year period, Henrico County's percentage of current **uncollected** real and personal property taxes has ranged from a low of 0.7 percent in FY08, to a high of 1.4 percent in FY13. Since the FY13 peak, uncollected current property taxes have steadily trended down to 1.0 percent. Even at the FY13 peak of 1.4 percent, uncollected current property taxes, as a percent of the total levy, were well below the 5.0 percent level that Bond Rating agencies consider negative.

In looking at this indicator, a consistency in collections on the part of the County is depicted, as the range on the graph is within expected parameters. In the past several years, significant enhancements have been made in the collection of delinquent real estate taxes. This, in part, can be attributed to Henrico's commitment to improving customer service by streamlining collection procedures and increasing payment options for County residents. In this time period, Henrico has implemented acceptance of payments by credit card over the telephone and via the internet, initiated acceptance of payments by debit and credit cards in person, instituted a monthly debit program for personal and real property tax payments, continued to be more timely in collecting delinquent taxes and enhanced its collection processes. The results of these efforts can clearly be seen above.

One ancillary fact that needs to be mentioned is that the County's top ten "Principal Taxpayers" continued to constitute a large percentage of the tax base in FY18, at 6.8 percent. This is an important note for this indicator since collections of current taxes from the "Principle Taxpayers" of a locality are generally made in the year they are due.

Due to enhancements made in the collections area in the past several years, levels are anticipated to remain well below 2.0 percent. As such, no warning trend is noted for this indicator.

WARNING TREND: Decreasing revenues from user charges as a percentage of total expenditures for providing related service.

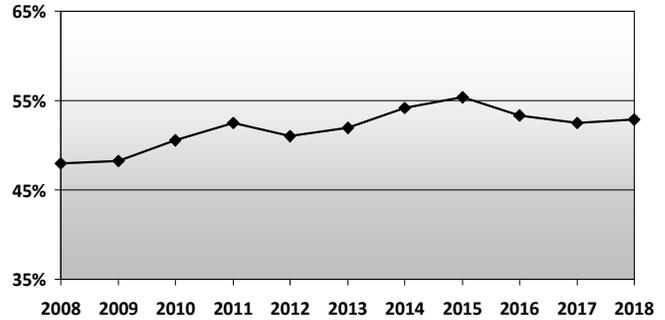

Formula:

$$\frac{\text{Revenues from User Charges}}{\text{Expenditures for Related Services}}$$

User Charge Coverage (Revenues/Expenditures)

User Charge Coverage:

User charge coverage refers to whether or not fees and charges cover the full cost of providing a service. Henrico County charges fees for the employee cafeteria, recreation activities, and building permits in the General Fund. In the Special Revenue Fund there are fees for the school cafeteria, mental health services, street lighting, and solid waste services. As coverage declines, the burden on other revenues to support these services increases. Inflation will erode the user charge coverage if not reviewed and amended periodically. Therefore, costs and fees should be reviewed frequently to ensure that the desired level of coverage is maintained.

Trends:

As shown in the graph, the user charge coverage for the County has measured less than 55.0 percent for much of this eleven-year period, with the exception being in FY15, in which user charge coverage increased to 55.4 percent. This ratio decreased markedly to 53.3 percent in FY16 and then 52.5 percent in FY17. The percentage rebounded slightly to 52.9 percent in FY18. The indicator measures user coverage of seven specific expenditure areas. These are: Building Inspections, Employee Cafeteria, Mental Health, Recreation, Street Lighting, School Cafeteria and Solid Waste. The increase in percentage in FY18 was due to robust growth in revenues for Building Inspections.

In looking at the operational components, the user charge coverage percentages for Building Inspections had typically been sufficient to cover the activities of that department. It should be noted that in FY07, the user charge coverage percentage for Building Inspections was 99.9 percent, then falling to 48.5 percent in FY10 due to the economic slowdown. In FY14, structure and equipment permit fees were increased in an effort to close the coverage gap, and as a result, the coverage grew to 76.9 percent. In FY15, for the first time since FY05, permit fees sufficiently covered all costs of Building Inspections. This trend has continued over the past three fiscal years, as rapidly growing permit fees far exceeded Building Inspections expenses in FY18.

Mental Health’s user charge coverage increased steadily from FY08 to FY14, growing from 39.3 percent to 47.9 percent in that timeframe. The coverage ratio dropped gradually to 45.3 percent in FY17 and then precipitously to 39.7 percent in FY18. The steep drop in FY18 was due to a 16.3 percent increase in expenditures far outpacing a 0.2 percent increase in fee revenues. The user charge coverage for Solid Waste shows a very similar trend, growing from 79.4 percent in FY08 to 98.4 percent in FY17, then falling to 74.5 percent in FY18. This ratio drop was caused by a 28.9 percent increase in expenditures, much of which may have been one-time in nature. In looking at Recreation, the user charge coverage in this area has averaged 4.6 percent throughout this time period. Also, in this eleven-year time period, the School Cafeteria has typically generated sufficient revenues to cover operational requirements.

This indicator in the eleven-year period has averaged 51.9 percent. Excluding Recreation, the indicator has averaged 69.2 percent. As the local economy continues to improve, these user fees should continue to improve. As such, no warning trend is noted for this indicator and the County will continue to maximize efforts to ensure coverage rates are appropriate to reduce reliance on other County revenues.

WARNING TREND: Declining revenue variance as a percentage of net operating revenues.

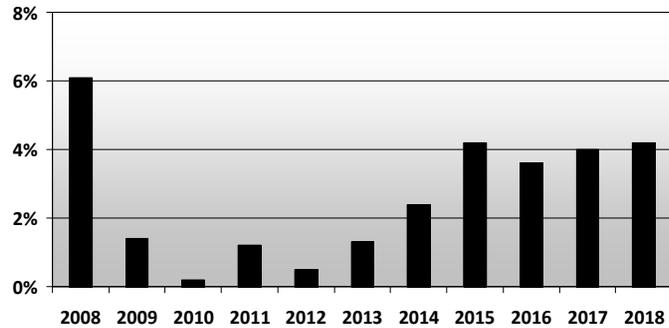

Formula:

$$\frac{\text{Revenue Variance}}{\text{Net Operating Revenues}}$$

Revenue Variance:

This financial indicator examines the differences between revenue estimates and revenues actually received. It includes revenues in the General, Special Revenue, and Debt Service funds. Major discrepancies in revenue estimates can be an indication of a declining economy, inefficient collection procedures, or inaccurate estimating techniques. On the graph to the right, the “0%” represents the fiscal year budgeted estimates. A positive number reflects a positive revenue variance, indicating budget estimates were met, while a negative number reflects missed revenue projections.

Revenue Variance
(as a % of Net Operating Revenues)

Trends:

The overall trend depicted above reveals that the County’s revenues exceeded budget estimates for each of the eleven years analyzed.

In looking at this eleven-year period, this indicator peaked in FY08, when the budget to actual revenue variance reached 6.1 percent. The low points may be found from FY09 through FY13, when the variances ranged from 0.2 percent in FY10 to 1.3 percent in FY13. The variance for FY14 increased to 2.4 percent. In the four most recent fiscal years, the variance has ranged narrowly from 3.6 to 4.2 percent.

Looking at the trend since FY08, the County’s annual revenue variance has averaged 2.6 percent. The County of Henrico maintains a conservative posture when projecting revenues on an annual basis. The budget to actual revenue variance of 6.1 percent in FY08 reflected the highest level in this eleven-year period. The impact of the economic downturn is evident from FY09 through FY13, as the gap between estimated and actual revenue collections narrowed due to virtually all revenue sources declining. During this period, and in anticipation of a slow economic recovery, several sustainable expense reduction initiatives were implemented that allowed the County to reduce overall expenses by more than \$125 million, including the elimination, freezing, or unfunding of more than 650 positions Countywide.

Continuously improving revenue collections, combined with departments continuing to find efficiencies, allowed the County to post an improved 2.4 percent revenue variance in FY14, contributing to growth in overall General Fund balance as well – the first such increase in fund balance in five years. Revenue variances have averaged 4.0 percent from FY15 to FY18 due to conservative revenue estimates, the continuing performance of the meals tax, and the continued focus on minimizing expense growth. The continuation of conservative revenue estimates in the FY19 budget will should yield positive revenue variances into the foreseeable future. As such, no warning trend is warranted for this indicator.

WARNING TREND: Increasing number of employees per capita.

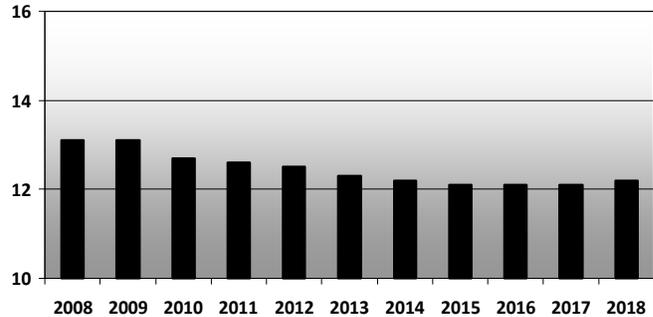

Formula:

$$\frac{\text{Number of General Government Employees}}{\text{Population}}$$

Employees per Capita
(Employees per 1,000 Population)

Employees Per Capita:

Personnel costs reflect the major portion of a locality's operating budget, and plotting changes in the number of employees per capita is another way to measure changes in expenditures. An increase in employees per capita might indicate that expenditures are rising faster than revenues, or that the locality is becoming more labor intensive, or that personnel productivity is declining.

Trends:

The County's General Government personnel complement (which does not include the personnel complement of the Henrico County Public Schools) increased by 226 employees from FY06 to FY09, then was reduced by 73 positions from FY10 to FY14. In the four years since FY14, the complement has grown by 173. The graph above illustrates that the number of employees measured 13.1 employees per 1,000 population during FY08 and FY09. This ratio steadily dropped to the level of 12.1 in FY15 and has held constant at that level until ticking up to 12.2 in FY18.

Three notes are warranted for this indicator. First, the graph above does not exclude departments that offer specialized services not offered by most localities in the State. Henrico County is one of two counties in the State that maintain its own roads, and the information above includes 262 employees in the Public Works department. Second, the personnel complement does not include positions that are completely tied to non-County funding sources and do not have local revenue sources supporting them. As of this writing, the County has 335 of these positions throughout the County. Finally, this indicator includes positions that are currently being held vacant as a result of the County's hiring freeze. As of this writing, the County is holding 375 vacant positions that are in the personnel complement.

In the two years that precede the examined timeframe, FY06 and FY07, this indicator grew as a result of several new facilities that were built as a result of the two General Obligation Bond Referenda held in November 2000 and March 2005. In October 2008, in response to several troubling economic indicators at that time, the County implemented a hiring freeze that impacted nearly all departments across the County. To assist in balancing the FY11 budget against significant revenue reductions, the County eliminated 101 vacant positions in FY10. The result of this action is that the number of General Government employees per 1,000 population was reduced from 13.1 in FY09 to 12.7 in FY10, easily the largest year-over-year fluctuation in the time period examined. In the FY12 budget 21 vacant positions were eliminated to assist in balancing the budget and 21 positions were placed into a hold complement, dropping the indicator to 12.5 employees per 1,000 population. In FY12 through FY14, the number of positions remained constant at 3,927 positions, despite the increase in population. In FY15, the number of positions increased by 10 to 3,937 and in FY16, the number of positions increased by a net total of 49 to 3,986. Then in FY17 and FY18, the county added 46 and 68 positions, respectively, bringing the total to 4,100. The increase in employees in FY18 is partially attributable to the operational needs associated with the first of the November 2016 Bond Referendum projects. It is anticipated that the number of General Government positions will increase further as more of those projects are built out.

The number of Police positions has steadily increased in recent years due to a five-year plan of promised increases to patrol personnel and additional positions for the new radio system. Fire's increases were due to a three-year commitment to hire additional firefighters for extra coverage and positions for the new Fire Station #19.

As the local economy improves and demands for services increase, new positions will be needed to meet the community's needs. However, the addition of a new position requires an extensive analysis and justification. Further, if a position is no longer required for a service, then that position will be reallocated within the County where it can be utilized to minimize the need for new positions. With these practices in place, no warning trend is noted for this indicator.

WARNING TREND: Increasing fringe benefit expenditures as a percentage of salaries and wages.

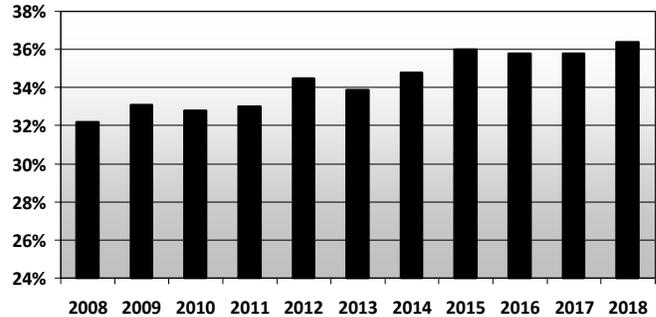

Formula:

$$\frac{\text{Fringe Benefit Expenditures}}{\text{Salaries and Wages}}$$

Fringe Benefits
(as a % of Salaries)

Fringe Benefits:

The fringe benefits measured on this indicator are: FICA Taxes, Payments to the Virginia Retirement System (VRS), Health Insurance, VRS Group Life Insurance, Unemployment costs and Worker’s Compensation. The cost of these benefits is divided by the cost of salaries and wages paid in these years to obtain the percentages depicted on this chart. Charting these costs is valuable as they can inadvertently escalate and place a financial strain on a locality.

Trends:

The fringe benefits ratio has averaged 34.4 percent between FY08 and FY18. The high point reflected in this time frame is FY18, which measured 36.4 percent. Clearly, the trend for this indicator reflects significant annual increases in the prior eleven fiscal years, and this trend is anticipated to continue.

Three years in the eleven years examined reflect net declines in this indicator – FY10, FY13, and FY16. In FY10, fringe benefits as a percent of salaries fell to 32.8 percent; however, this statistic is extremely misleading as healthcare costs increased, and all other fringe benefit rates remained consistent with FY09. The reason for this reduction is the result of a budget savings measure at the State level by the General Assembly in which the State deferred its fourth quarter VRS payment to the following fiscal year, which eliminated the fourth quarter employer share of the VRS payment for teachers across all localities. Further, in FY11, the General Assembly lowered the VRS teacher employer rate from 9.85 percent to 3.93 percent as a budget balancing decision. However, the General Government VRS rate increased, in addition to all other fringe benefit rates, and the fringe benefits ratio increased to 33.0 percent. The full-year impact of the VRS rate increase from FY11 can be seen in FY12, as the indicator sharply increased to 34.5 percent. In FY15, the ratio increased to 36.0 percent, before dropping slightly to 35.8 percent in both FY16 and FY17. In FY18 the measure hit a high point of 36.4 percent due to rapid growth in the County’s cost for employee healthcare premiums.

The reduction in this indicator in FY13 was misleading as the General Assembly, as part of a series of reforms to increase the funding status of VRS and mitigate future cost increases exacerbated by the budget actions of the General Assembly in FY10 and FY11, forced localities to provide a 5.0 percent salary increase to its employees in exchange for the employees paying 5.0 percent of their respective salary into VRS – a portion that localities, including Henrico, had provided as a benefit to employees. While this action helped to reduce this indicator, it did so at a net cost increase of just under \$6.0 million to the County’s taxpayers while resulting in a net pay reduction to employees as they had to pay additional FICA taxes on the higher salary.

In looking at health care costs, the County’s cost for providing health care *per employee* in FY08 was \$5,353. By FY18, this cost had increased to \$8,187 *per employee*, or a change of 52.9 percent. While the County cannot influence national trends regarding the cost of health care insurance, Henrico has taken a very aggressive approach in cost-containment by transitioning health care to a self-insurance program, which went into effect January 1, 2008. Prior to this transition, the County’s health care program operated as a fully insured program, which, in exchange for the payment of a premium, an insurance company assumed all risk, administered the program, and paid all claims. With the transition to a self-insured program, the County pays claims and third party administrative fees. Self-insurance allows the County to more fully control all aspects of the plan, including setting rates to smooth out the impact of

increases on employees and the County, while maintaining adequate funding to cover claims, expenses, and services. This approach has also allowed Henrico to maintain excellent benefits provided to its employees, as healthcare premiums remain among the lowest cost of any local government in the Richmond Metro area. The County will also continue to monitor any federal actions that impact the health care industry as they will certainly affect this benefit provided to the County's employees.

The second cost that is outside of the County's control is the cost of Virginia Retirement System (VRS) and life insurance benefits. The past fifteen Trends documents have noted a concern regarding the rising costs related to VRS benefits. The concern is principally focused on one-time budget balancing actions of the Virginia General Assembly that reduce a State contribution rate for a finite period of time (to reduce immediate costs) and in later years, increase contribution rates as a result of segments of the system that are "under-funded." An example of the impact of these past actions occurred in the FY13 budget, where the VRS employer rate for teachers increased by 84.2 percent in *one year*.

In its 2010-2012 Biennial Budget, the General Assembly withheld \$620 million in VRS payments in an effort to balance its budget, an action that will result in higher VRS rate increases in future budgets due to the need to repay these funds. In fact, the VRS teacher rates for FY13 reflect an increase of 1.43 percent of salaries (a cost of \$4.1 million in and of itself) specifically tied to the repayment of this deferred payment, which will be applied to local VRS rates for the next ten years. This decision, coupled with an estimated unfunded liability approaching \$20 billion, sparked increased interest from the General Assembly and the Governor regarding long-term "fixes" to VRS. For example, in FY12, the General Assembly approved a mandated 5.0 percent employee contribution for all State employees and encouraged localities to follow suit.

In 2012, the General Assembly mandated that all non-Public Safety employees that are not vested (those with less than five years) in VRS as of January 1, 2013, and all new employees hired after January 1, 2014, be placed into a "hybrid" retirement plan, consisting of both a defined benefit and defined contribution plan. The defined contribution component requires an employer match. Implementation of the hybrid retirement plan should mitigate cost increases slightly for several years. Further, the VRS Board now requires 100 percent funding by the General Assembly.

An additional cost that impacts this indicator is the VRS Life Insurance benefit for employees. This benefit was not funded by the State between FY02 and FY06 (and therefore – the County could not fund the local required amount). In FY07, the State re-instituted payment requirements, and in FY11 reduced the rate from 0.79 percent to 0.28 percent to reduce expenditures. As a result of this significant reduction, the 2012 General Assembly increased the VRS Life rate from 0.28 percent to 1.19 percent of salaries, a one-year increase of 425.0 percent. In FY15, VRS life was again increased to 1.33 percent of salaries, which was an 11.76 percent increase.

Having gone from 32.2 percent in FY08 to 36.4 percent in FY18, the long-term trend in this indicator is upward and prospects for the future remain negative. The two principal reasons for the increase are health care and Virginia Retirement System costs, both of which fall largely outside of the direct control of the County. As such, a warning trend for this indicator continues.

WARNING TREND: Decreasing amount of General Fund operating surpluses as a percentage of net operating revenues.

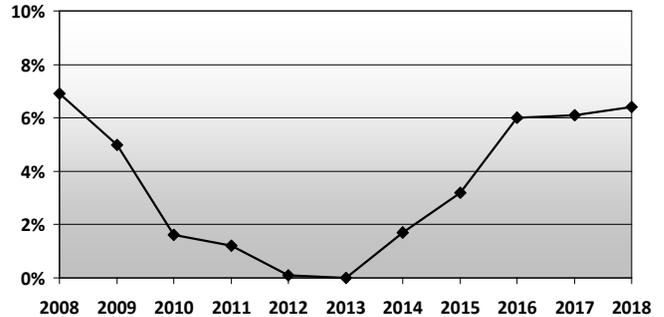

Formula:

$$\frac{\text{General Fund Operating Surpluses}}{\text{Net Operating Revenues}}$$

Operating Surpluses:

An operating surplus occurs when current revenues exceed current expenditures. If the reverse is true, it means that at least during the current year, the locality is spending more than it receives. This can occur because of an emergency such as a natural catastrophe that requires a large immediate outlay. It can also occur as a result of a conscious policy to use surplus fund balances that have accumulated over the years. The existence of an operating deficit in any one-year may not be cause for concern, but frequent occurrences may indicate that current revenues are not supporting current expenditures and serious problems may lie ahead.

Operating Surpluses
(as a % of Net Operating Revenues)

Trends:

The County of Henrico has produced an operating surplus for each of the eleven years presented. In FY08, the surplus was at a peak of 6.9 percent. As clearly seen on the chart above, throughout the economic downturn, beginning in FY08 and continuing through FY13, the County’s annual operating surplus consistently declined. In FY09, well into the worst recessionary economic environment since the Great Depression, the County achieved an operating surplus of 5.0 percent. In FY10 and FY11, the County achieved operating surpluses of 1.6 percent and 1.2 percent, respectively. Considering the environment in which these surpluses were achieved, and that it was accomplished without raising taxes, laying off employees, or cutting service levels, the operating surpluses in these two fiscal years is considered in a very positive light. However, as the economy continued to struggle the County continued to face fixed cost increases making the ability to close budget gaps more and more challenging. This is reflected in the FY12 operating surplus of only \$535,000, or 0.1 percent of net operating revenues as well as the FY13 operating surplus of \$336,000.

With the first moderate signs of recovery in the local economy, particularly real estate, and increases in State Aid, a \$17.0 million operating surplus was realized in FY14. This was the first increase in operating surplus as a percentage of net operating revenues since FY07. In FY15, the operating surplus doubled to \$34.2 million as a result of fiscal structure added back to the budget baseline that fiscal year. From FY16 to FY18 the trend continued upward, and the operating surplus grew annually from \$64.7 million in FY16 to \$74.3 million in FY18. With conservative revenue estimates for the FY19 and FY20 budgets, these two fiscal years should yield operating surpluses as well. This, in combination with moderate economic growth, should yield surpluses in future fiscal years. As such, no warning trend is warranted for this indicator.

WARNING TREND: Consistent enterprise losses.

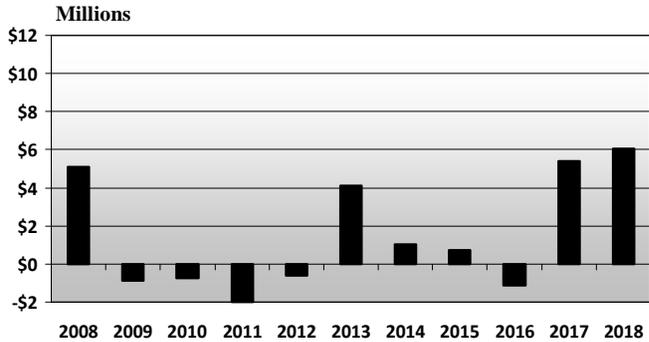

Formula:

Enterprise Profits or Losses in Constant Dollars

Enterprise Losses:

Enterprise losses are a highly visible type of operating deficit. They show potential problems because enterprise operations are expected to function as a "for profit" entity as opposed to a governmental "not for profit" entity. Managers of an enterprise program may raise rates and find that revenues actually decrease because users reduce their use of the service. Enterprises are typically subject to the laws of supply and demand; therefore, operating deficits are distinct indicators of emerging problems. On the graph to the right, the **negative numbers on the scale represent operating losses**. It should be noted that depreciation expenses are included in this analysis.

Enterprise Profits or Losses
(In Constant Dollars)

During the eleven-year period shown, Henrico County's enterprise operations have included Water and Sewer services, and the Belmont Golf Course.

Trends:

After a four-year trend of negative results from FY09 to FY12, the overall trend for FY13-FY15 shown above reflected positive results. FY16 trend showed the first Enterprise loss in four years but was followed in FY17 and FY18 by the two largest years of profit for the entire eleven-year examined period. The Water and Sewer Fund consistently makes up more than 90.0 percent of the total net income or loss reported in the Enterprise Fund.

There are several factors impacting this indicator during this time frame. From FY08 through FY10, operating expenditure growth outpaced revenue growth in each fiscal year, mostly a result of the downturn in the economy which impacted revenue growth. As can be seen in the chart above, FY09 through FY12 all reflect operating revenues that were insufficient to cover operating expenditures. This is not indicating that the Water and Sewer Fund did not make an overall "profit" in these fiscal years. However, it does indicate that operating requirements from FY09 through FY12 required the use of revenue sources that are generally associated with infrastructure, not operations, such as water and sewer connection fees. FY13 saw a return to "profitability." This was the result of a 2.0 percent increase in revenues collected as well as a 0.7 percent decrease in expenditures. The Enterprise Fund maintained a lesser amount of "profitability" in FY14 and FY15. It should be noted that depreciation expenditures are included in this analysis, which are simply accounting entries and do not impact cash flow. To give insight into the impact of depreciation expenses on this indicator, the depreciation expense (unadjusted) for the Water and Sewer Fund in FY11, the lowest level of this indicator in the eleven years examined, totaled \$28.4 million. **Excluding depreciation expenditures, this indicator would reflect operating profits for all fiscal years examined in this analysis.**

Even with its operating "losses" posted in the four fiscal years from FY09 to FY12, during this entire eleven-year period the Water and Sewer Fund generated sufficient net revenues each year to exceed the coverage requirements under its Revenue Bond covenants. As a result of the consistent financial results experienced by the Water and Sewer Fund, Fitch IBCA awarded Henrico County an "AAA" rating in 2001. In 2008, Standard & Poor's upgraded its rating to an "AAA" as well. To achieve one "AAA" bond rating is very rare for bonds issued by local utility departments, and Henrico County's Water & Sewer Fund has two of them. In FY16, Fitch changed Henrico County's rating from "AAA Negative Outlook" to "AAA with a Stable Outlook". This change in designation was due to the strong financial health of the system and the increases in the financial metrics. As such, **no warning trend is warranted for the Water and Sewer Fund.**

The Enterprise Fund's operating results also reflects the financial performance of the Belmont Golf Course. From FY02 to FY07, the Belmont Golf Course reported net operating losses of varying amounts. These losses were due to several factors. Rounds of play for each of these fiscal years were less than FY99 due to an increase in the number of golf courses in the area. Additionally, expenditures to correct turf damage and capital improvements were incurred in each of these years.

In FY08, the Belmont Golf Course posted its first positive operating result since FY99. In that fiscal year, the course implemented several business model changes that promoted finding efficiencies in its operations to allow for reduced expenditures and the ability to maximize revenues from every source. Despite the operating "profit" in FY08, the FY08 Trends document noted the following observation:

"The current economic environment will likely take its toll on Belmont Golf Course and hinder revenue growth in the near future."

In FY09, the Belmont Golf Course experienced an 8.0 percent decline in the number of rounds of play. The number of rounds played fell another 6.8 percent in FY10 and 0.9 percent in FY11. As such, the Golf Course posted net operating losses in these three fiscal years. Improvement in the economy in FY12 resulted in a 13.2 percent increase in the number of rounds of play, though a net operating loss was again reported. In FY13, rounds dropped 8.0 percent and in FY14 that number decreased by an additional 13.7 percent, yielding the lowest recorded total since 1978 when the County first acquired the golf course. In FY15, as a result of targeted cost reductions at the golf course and slight green fee and cart increases, as well as 1.3 percent increase in rounds played, the Belmont Golf Course nearly achieved profitability. However, Belmont experienced a 2.2 percent decrease in the number of rounds in FY16 to 28,285, a new historical low for the golf course's history with the County and reflective of the downward trend in golf rounds nationwide. Starting in FY17, the golf course underwent the first round of stream restoration repairs through the assistance of State grants that impacted the playability of the course as half of it was closed in order to accommodate these repairs. This resulted in another decline in annual rounds played, dropping to 24,071, or a 14.9 percent decrease. The total number of rounds decreased by an additional 3.5 percent in FY18, meaning that the overall decrease in rounds played was 40.5 percent from FY08 to FY18.

Currently, the County is soliciting public input to examine other alternatives for the Belmont Golf Course property by developing a master plan. This includes finding a private operator to take over operations of Belmont or converting the property to a park and discontinuing golf operations. Until an alternative is decided, the course will continue to operate as is and, as such, a warning trend for the Golf Course continues.

WARNING TREND: Declining unassigned General Fund Balance as a percentage of net operating revenues.

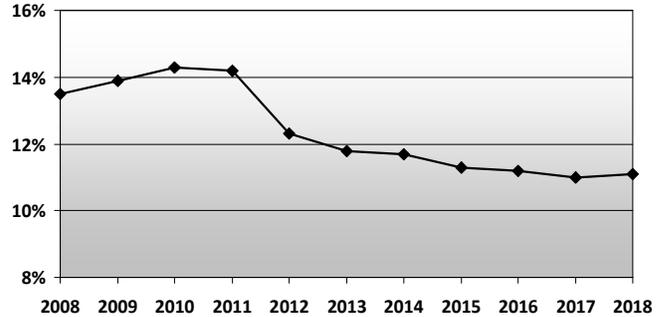

Formula:

$$\frac{\text{Unassigned General Fund Balance}}{\text{Net Operating Revenues}}$$

General Fund Unassigned Balance (as a % of Net Operating Revenues)

General Fund Unassigned Balance:

The level of a locality's unassigned fund balance may determine its ability to withstand unexpected financial emergencies, which may result from natural disasters, revenue shortfalls, or steep rises in inflation. It also may determine a locality's ability to accumulate funds for large-scale one-time purchases without having to incur debt. *Note: This historical depiction is reflected differently than the percentages typically referred to in the Annual Fiscal Plan as "net operating revenues." **In the Trends document, this includes the General, Special Revenue and Debt Service Funds.** As such, the percentage reflected on this page is lower than what is reflected in the Annual Fiscal Plan, which reflects the General Fund Unassigned balance as a percentage of General Fund expenditures.*

Trends:

Henrico County's unassigned General Fund balance as a percentage of net operating revenues remained relatively static from FY08, when it was 13.5 percent, to FY11, where it was 14.2 percent before dropping each year until FY17, when it dropped to 11.0 percent. The percentage rebounded modestly in FY18, rising to 11.1 percent. It should be noted that overall General Fund balance increased \$25.9 million in FY18.

As noted above, the depiction of this indicator in the Trends document is different than the indicator reflected in the Annual Fiscal Plan. In FY06, the Board of Supervisors agreed with a policy recommendation to maintain the County's unassigned fund balance at a level of 18.0 percent of General Fund expenditures (again, different than the indicator reflected in this document). Effective June 30, 2012 (FY12), as part of the County's FY13 budget balancing efforts, a policy change was recommended to the Board to reduce the amount of unassigned fund balance maintained to 15.0 percent of General Fund expenditures in an effort to "free up" cash reserves to fund vehicle replacement in the capital budget.

It is of great significance that the County's overall unassigned fund balance grew by 8.3 percent from FY07 to FY11, amidst the worst economic environment since the Great Depression. Again, the decline in FY12 is associated with the County's policy change regarding unassigned fund balance while the decline in FY13 is the result of a drop in unassigned fund balance. FY14, through FY17 reflected unassigned fund balance increases ranging from 1.1 percent, to 2.9 percent, and FY18 saw robust growth of 4.5 percent. It is important to again note that this depiction of General Fund balance is completely different from those referred to in the Annual Fiscal Plan, as "net operating revenues" in this indicator includes the General, Special Revenue, and Debt Service Funds. In the Annual Fiscal Plan, net operating revenues typically refer to just General Fund revenues.

Overall, the County's Unassigned General Fund Balance reflects a positive trend since FY08 that places Henrico in a desirable position for a local government. Henrico County has long held AAA bond ratings by all three bond rating agencies. The maintenance of a healthy fund balance is a critical component examined by rating agencies when assigning bond ratings. Henrico has a long history of maintaining a healthy unassigned General Fund balance and will continue to use prudence in safeguarding this resource.

As a result of the recession and correlated struggling revenue growth, in combination with consistent fixed cost increases, the County was forced to cut expenditures and become more aggressive in its revenue estimates. This

effort was necessary to avoid tax rate increases, service delivery reductions, and layoffs. However, overall fund balance – both assigned and unassigned – declined four consecutive fiscal years by a total of 21.8 percent from FY10 to FY13. This is not necessarily reflected in this indicator, as assigned fund balance levels are not considered in this analysis. Assigned fund balance is important as there are several critical annual appropriations that are made from these balances, including appropriations from the Risk Management Self-Insurance Reserve and funding for specific pay-as-you-go capital projects. Though the intent of a number of these balances are for one-time purposes, annual appropriations of reserves from some of these “buckets” require additional funds to build the reserves back up for the following fiscal year. With unassigned fund balance levels currently calculated as a percentage of General Fund expenditures, when overall fund balance declines, the assigned fund balance levels are impacted on a greater scale.

With the County’s revenue picture becoming more positive over the past five fiscal years, unassigned and overall fund balance levels have improved. However, net operating revenues have had greater growth in comparison to the unassigned fund balance. The County decided to utilize this growth in the net operating revenues to strengthen the Risk Management fund by adding 5.0 million to its operating budget, fund the vehicle replacement funds for Police, Fire, and Schools with current revenues, and fund the Technology Replacement Fund again with current revenues after years of utilizing only reserves. These decisions justify the slight decreases in this indicator for FY15, FY16, and FY17. In review of the current fiscal year there is a great indication that the operating revenue will continue to grow, which verifies that these funding decisions are sustainable and will place the County in an improved fiscal position moving forward. As such, no warning trend is warranted for this indicator.

WARNING TREND: Decreasing amount of cash and short-term investments as a percentage of current liabilities.

Formula:

$$\frac{\text{Cash and Short-term Investments}}{\text{Current Liabilities}}$$

Liquidity:

A good measure of a locality's short-run financial condition is its cash position. "Cash position" includes cash on hand and in the bank, as well as other assets that can be easily converted to cash, such as short-term investments. The level of this type of cash is referred to as liquidity. It measures a locality's ability to pay its short-term obligations.

Short-term obligations include accounts payable, the principal portion of long-term debt and other liabilities due within one year of the balance sheet date. The effect of insufficient liquidity is the inability to pay bills or insolvency. Declining liquidity may indicate that a locality has overextended itself.

Trends:

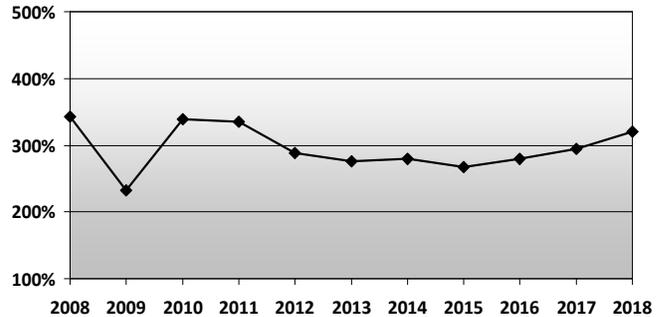

A liquidity ratio of greater than 1:1 (more than 100 percent) is referred to as a "current account surplus." Henrico County has been successful in achieving a current account surplus for the eleven-year period shown.

From the chart above, this indicator reflects a large "dip" downward in FY09 mostly in the area of "principle due in 12 months." It should be noted, however, that the spike in "principle due in 12 months" is misleading, as it mostly reflects two bond refunding's in CY09. The County's bond refunding's do not increase the County's outstanding long-term debt or the length of time to pay off the debt. "Principal due in 12 months" related to newly issued debt is minimal by comparison. In fact, ignoring the impact of the bond refunding's in CY09 altogether, current liabilities only increased 13.6 percent instead of 58.1 percent, and the Liquidity indicator would have been 323.2 percent in FY09, much higher than the recorded 232.2 percent. In FY10 this indicator increased to 339.4 percent which was an overall decline in current liabilities. and in FY11, the indicator dropped slightly to 335.4 percent. In FY12, the indicator dropped significantly to 288.2 percent, mostly due to the large debt issuance in that fiscal year, as the County combined two planned General Obligation debt issues into one as a result of the attractive interest rates at the time. This debt issuance finalized the County's March 2005 General Obligation Bond Referendum. Over the most recent six fiscal years, FY13 to FY18, this indicator averaged 286.1 percent, with FY18 being 320.0 percent, the highest level since FY11.

Over the past eleven years, the County has maintained an average liquidity ratio of 2.94:1, which is more than *twice* the defined "current account surplus" above. The low point in this indicator of 2.32:1 was experienced in FY09. By performing annual debt capacity reviews, compiling a five-year Capital Improvement Program that encompasses all funds, and by ensuring that those capital projects that obtain funding are appropriately cross-walked to the annual operating budget, the County of Henrico will not incur liabilities at a rate that cannot be supported within established resources. Based on the upward path of this trend, no warning is warranted for this indicator.

Liquidity

(Cash & Investments as a % of Current Liabilities)

WARNING TREND: Increasing current liabilities at end of year as a percentage of net operating revenues.

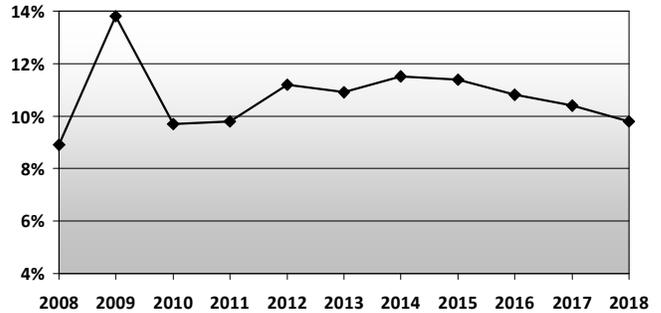

Formula:

$$\frac{\text{Current Liabilities}}{\text{Net Operating Revenues}}$$

Current Liabilities:

Current liabilities include short-term debt, the current principal portion of long-term debt, accounts payable and other current liabilities due within one year of the balance sheet date. A major component of current liabilities may be short-term debt in the form of tax or bond anticipation notes. Although the use of short-term borrowing is an acceptable way to handle erratic flows of revenues, an increasing amount of short-term debt outstanding at the end of successive years can indicate liquidity problems, deficit spending, or both.

Current Liabilities
(as a % of Net Operating Revenues)

Trends:

In the eleven-year trend depicted above, the indicator has ranged from a low of 8.9 percent in FY08 to a high of 13.8 percent in FY09. As noted in the “Liquidity” indicator narrative, total current liabilities increased 58.1 percent in FY09. However, this increase is misleading, as it is mostly attributed to an increase in “principal due in 12 months” as a result of two significant bond refundings in CY09, with only minimal impact, by comparison, due to newly issued debt. This indicator fell back to more “normal” levels at 9.7 percent in FY10. Over the past eleven years the indicator has been, on average, 10.7 percent. The decline from FY14 to FY18 has been the result of year-end balances of accounts payable and other current liabilities.

In November 2000, the voters approved a \$237.0 million G.O. Bond Referendum. In March of 2005, the voters approved a \$349.3 million G.O. Bond Referendum. Both referenda included School, Fire, Roadway, Public Library, and Recreation and Parks projects. The County of Henrico chose to phase in this debt over a seven-year time frame). By taking this approach, the County has been able to pay required debt service costs and ancillary operating expenses without negatively impacting its operating budget and this indicator is reflective of that planning.

In November 2016, the voters approved a \$419.8 million G.O. Bond Referendum. This referendum also included projects for Schools, Fire, Roadway, Public Library and Recreation and Parks. The plan developed will issue this debt over a six-year time period and the debt service is projected to be covered with current revenues – those that are freed up due to paying off debt obligations or revenues not currently appropriated.

For this eleven-year period, this ratio has been between 8.9 percent and 13.8 percent of net operating revenues. Although the general trend from FY08 to FY14 was slightly upward, there has been a downward trend for the past four fiscal years. The fact that the County has not experienced significant annual changes in this indicator, excluding the misleading increase in FY09, is reflective of the County’s continuation of conservative financial management. Also, this consistency is reflective of the County’s prudent debt management practices, and successful long-term planning for infrastructure improvements. This indicator is very much aligned with the next two indicators: 1) long-term debt as a percentage of assessed valuation and 2) debt service as a percentage of net operating revenues. For these reasons, no warning trend is noted.

WARNING TREND: Increasing amount of net direct long-term debt as a percentage of assessed valuation of real property.

Formula:

$$\frac{\text{Net Direct Bonded Long-term Debt}}{\text{Assessed Valuation of Real Property}}$$

Long-Term Debt:

A locality's ability to repay its debt is determined by comparing net direct long-term debt to assessed valuations. Net direct long-term debt is direct debt minus self-supporting debt such as revenue bonds or special assessment bonds, which have a repayment source separate from general tax revenues. An increase in net direct long-term debt as a percentage of real property valuation can indicate that a locality's ability to repay its obligations is diminishing.

Another way to monitor the growth in debt is to measure it on a per capita basis. As population increases, it would be expected that capital needs, and hence, long-term debt needs may increase. The underlying assumption is that a locality's revenue generating ability, and ability to repay debt, is directly related to its population level. The concern is that long-term debt should not exceed the locality's resources for paying the debt. If this occurs, the locality may have difficulty obtaining additional capital funds, may pay a higher rate of interest for them, and therefore may have difficulty in repaying existing debt.

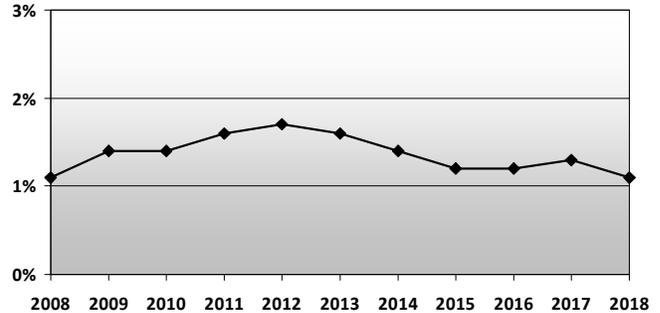

Trends:

As seen above, Henrico County's percentage of net long-term debt to real property valuations has remained relatively stable. During the eleven-year period shown above, the long-term debt indicator reached a high point of 1.7 percent in FY12 due to the County combining two years of planned debt issuances into one, while experiencing declining real property valuations. The combined issuance in FY12 completed the County's March 2005 General Obligation Bond Referendum. The FY08 and FY18 indicators of 1.1 percent reflect the low points in this eleven-year period.

In FY09, the indicator reflects a sharp increase to 1.4 percent due to a 27.1 percent increase in long-term debt, as the County issued \$137.5 million in General Obligation and VPSA Bonds. In FY10, this indicator remained constant at 1.4 percent; however, this statistic is slightly misleading as the County deferred its schedule bond issuance that year – and is solely due to an unprecedented drop in the County's real estate tax base. In fact, net long-term debt dropped 8.5 percent that fiscal year. In FY11, the indicator grew to 1.6 percent as the debt that was deferred in FY10 was issued, in the amount of \$72.2 million, and real estate values declined yet again. For FY13 and FY14, no new debt was issued. Since its peak, this indicator has fallen back to 1.1 percent for FY18. For FY16, it is important to note that outstanding debt reflected a net decrease of \$5.3 million as a result of the County issuing \$34.0 million in Lease/Revenue Bonds to fund the County's share of the regional 800 MHz Public Safety Communication System. In FY17, this indicator experienced a slight increase in long-term debt due to the first issuance of bonds related to the 2016 Bond Referendum.

As stated in the section "Current Liabilities", in November 2016 the voters overwhelmingly approved a \$419.8 million G.O. Bond Referendum to fund significant capital infrastructure projects for Schools, Fire, Roadway, Public Library and Recreation and Parks. Before the County put forward this plan, a debt affordability analysis above was conducted to insure the County's ability to repay the proposed debt that will be issued over a six-year period. It should be noted that for the debt affordability analysis for the referendum (and for any new debt issue the County undertakes) personal property is added to real property when determining "long-term debt as a percent of total assessed value." Adding the assessed value of personal property to real property lowers the percentage slightly, but this is the current methodology utilized by the Bond Rating Agencies for Virginia localities. The debt affordability analysis also includes calculations for and debt service as a percentage of General Fund expenditures, which is used by the Bond Rating

Long-Term Debt
(as a % of Assessed Valuation of Real Property)

Agencies to determine a locality's ability to issue debt. The analysis verified the affordability of the debt issuance plan put forward to the voters. No long-term warning trend is noted at this time, though this trend will be closely watched.

WARNING TREND: Increasing amount of net direct debt service as a percentage of net operating revenues.

Formula:

$$\frac{\text{Debt Service}}{\text{Net Operating Revenues}}$$

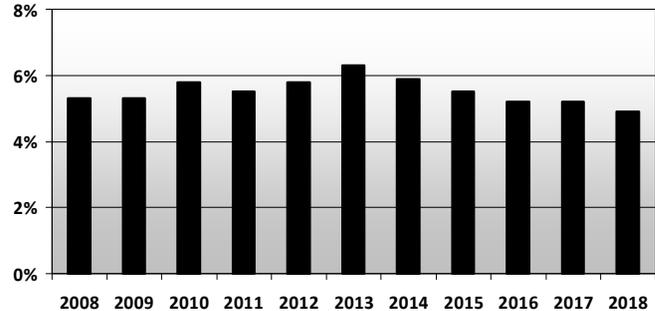

Debt Service

(as a % of Net Operating Revenues)

Debt Service:

Debt service is the amount of principal and interest that a locality must pay each year on net direct long-term debt, plus the interest it must pay on direct short-term debt. As debt service increases, it adds to a locality's obligations and reduces the locality's expenditure flexibility.

Debt service can be a major part of a locality's fixed costs, and its increase can indicate excessive debt and fiscal strain. If debt service on net direct debt exceeds 20.0 percent of operating revenues, it is considered a potential problem. Below 10.0 percent is the rate preferred by bond rating agencies. **It should be noted that "net operating revenues" used in this indicator include the General, Special Revenue and Debt Service Funds.** Debt service for this indicator includes principal and interest payments for General Obligation bonds, Virginia Public School Authority (VPSA) debt, Literary Loan debt, and Lease Revenue bonds including the Regional Jail and the Public Safety Communication System. The indicator does not include Enterprise Fund debt.

Trends:

As shown in the graph above, the debt service percentage reached the high point of 6.3 percent in FY13 with the low point of 4.9 percent in FY18. It is important to note that in this eleven-year time period, this indicator has fluctuated within a narrow range. The indicator average over the 11-year period is 5.5 percent.

This indicator will trigger a warning if the increase in debt service consistently exceeds the increase in net operating revenues. The issuance of debt normally results in a slight increase in this indicator, because in the year following the issuance of debt, the amount of debt service generally grows at a faster rate than operating revenues, however the consistency reflected above is indicative of the meticulous analysis that is performed before any debt issue is undertaken.

In November of 2000, the County's voters approved a \$237.0 million General Obligation (G.O.) Bond Referendum and in the spring of 2005, the County's voters approved a \$349.3 million G.O. Bond Referendum. These referenda included School, Fire, Roadway, Public Library, and Recreation and Parks projects. The financial plan that coincided with the approval of these projects assumed that the County would issue this debt over a multi-year period for each of the approved referenda. In FY01, the County issued the first of these planned issues totaling \$37.1 million. In FY02, the County issued \$27.0 million in G.O. bonds, the first of six issues in support of the 2000 G.O. Bond Referendum. In FY06, the County issued \$77.8 million in support of both the 2000 G.O. Bond Referendum and the first of seven planned issues for the 2005 G.O. Bond Referendum. In FY09, the County issued \$44.4 million in VPSA Bonds for a number of Schools projects approved on the March 2005 referendum that required additional funding due to unanticipated increases in construction costs. The County delayed by one year the sale of \$77.5 million in new debt originally scheduled for FY10 as a result of the economic downturn and its impact on revenue streams. In FY11 this G.O. debt was issued, in the amount of \$72.2 million. In FY12, the final \$66.1 million in new debt associated with the March 2005 G.O. Bond Referendum was issued.

In November 2016, the voters overwhelmingly approved a \$419.8 million G.O. Bond Referendum. This referendum included projects for Schools, Fire, Roadway, Public Library and Recreation and Parks. In FY17, the first debt issuance for the approved Bond Referendum totaled \$114.6 million. This was alongside a refunding of bonds that were originally issued in 2010 and 2011. The impact of the issuance of this new debt will occur with the FY18 and FY19 budgets. It is currently estimated that \$53 million will be issued in FY19. The remaining \$252.2 million in G.O. Bonds will be issued over the following five years as they are needed for the projects to be undertaken.

There are important differences between this indicator and the “Long-Term Debt” indicator. The “Debt Service” indicator reflects the amount of principal and interest the County pays annually on its long-term debt as a percentage of operating revenues. The “Long-Term Debt” indicator reflects the County’s total outstanding debt as a percentage of assessed real estate valuation. The “Long-Term Debt” indicator graph reflects a sharp uptick in FY09 due to the large amount of debt issued in that fiscal year. However, that spike is not evident in the “Debt Service” indicator chart. This is due to the County’s two bond refundings in CY09 that achieved substantial debt service savings. The realized savings were mostly allocated in FY09 through FY11 to help the County offset anticipated revenue reductions as a result. It should be noted that the County has taken part in several additional bond refundings since 2009 that have generated ongoing significant savings.

In FY10, the “Debt Service” indicator increased to 5.8 percent despite debt service savings attributed to the bond refundings and not issuing any new long-term debt during that fiscal year. The reason for this increase is twofold. First, debt service costs increased from the previous year due to the first full-year payment of the 2008 VPSA issue. The FY09 debt service payment associated with this issue was only for six months of interest. Second, significant declines in State aid and real estate tax revenue in FY10 yielded a significant reduction in net operating revenues.

In FY11, the County issued \$72.2 million in new debt, but the first principal payment wasn’t due until FY12, and only six months of interest was due in FY11, which resulted in a reduction of \$4.0 million in debt service payments when compared to FY10. In FY12, \$66.1 million in new debt was issued. Although operating revenues experienced a slight increase, the Debt Service indicator increased to 5.8 percent. In FY13, this indicator reached its peak at 6.0 percent as debt service expenses increased at a faster rate (10.1 percent) than net operating revenues (1.5 percent). As with the “Long-Term Debt” indicator, no long-term warning trend is noted at this time. But as debt is scheduled to be issued over the next six years, this indicator will be an important part of the debt affordability analysis conducted outside of the Trends document to assure the County’s ability to afford new debt.

It should be emphasized that this indicator is different than a similar measure included in the annual debt affordability analysis – which is “debt service as a percentage of General Fund Expenditures.” However, this examination in the Trends document does cross-verify the results of the debt affordability analysis.

WARNING TREND: Increasing days of unused vacation leave per municipal employee.

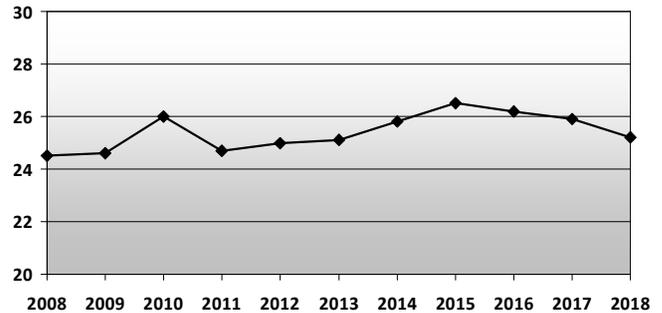

Formula:

$$\frac{\text{Total Days of Unused Vacation Leave}}{\text{Number of General Government Employees}}$$

Accumulated Vacation Leave (Days per Employee)

Accumulated Vacation Leave:

Localities usually allow their employees to accumulate some portion of unused vacation, which may be paid at termination or retirement. This expenditure is rarely funded while it is being accumulated although the costs of the benefit are covered through normal attrition. This is because of the fact that when an employee with many years of service is replaced, that employee is typically replaced with an employee with fewer or no years of service. The salary differential on a global basis is sufficient to pay for this benefit in any given fiscal year. While there is no fiscal impact that arises from this indicator, its inclusion is useful in depicting the overall vacation leave balances of the General Government workforce. Finally, it needs to be noted that vacation leave balances not utilized by the beginning of the new fiscal year are readjusted downward (that is, time is “lost”).

Trends:

In terms of the overall trend, the accumulated vacation leave indicator has averaged 25.4 days during the eleven-year period. What can be seen throughout this time period is stability in this indicator as it has ranged from a low of 24.5 days in FY08 to the high point of 26.5 days in FY15.

In taking a historical look, the indicator increased sharply in FY08 due to an adjustment of annual leave accrual rates and increased “carry-over” hours (less time “lost”) for employees with fifteen or more years of service. FY10 saw an unusual increase to 26.0 days of accumulated vacation leave per employee, mostly a result of the reduction in the hiring of new General Government employees in that fiscal year. To assist in balancing the FY11 budget to significantly reduced revenues, the County eliminated 101 vacant General Government positions. In FY11, the indicator dropped to 24.7, mostly due to the County’s hiring freeze yielding well over 200 positions throughout much of the fiscal year. In other words, while the positions were being counted in the General Government complement, there were no vacation days associated with them as they were unfilled. The indicator rose slightly to 25.0 in FY12 and remained relatively flat at 25.1 in FY13. In FY14, this indicator increased slightly to 25.8. In FY15, this indicator reached the highest point in the time period represented, increasing to 26.5 before decreasing in each of the next three fiscal years to its current level of 25.2. In the entire eleven-year period, this indicator has fluctuated within a range of 2.0 days.

The overall slight upward movement since FY08 is also reflective of the County’s workforce, as employees with more seniority earn more hours of vacation leave than less senior employees. Henrico County’s vacation leave indicator will generally increase as the average length of employment of County employees’ increases. With that said, if the declines of the past three years continue, this will be indicative of the workforce becoming younger and less tenured.

The most recent information suggests the County has a workforce whose average age is 45.0. The average County employee has been with the County for twelve years (Source: Human Resources Department). No warning trend is noted for this indicator.

WARNING TREND: A decline in capital outlay in operating funds as a percentage of net operating expenditures.

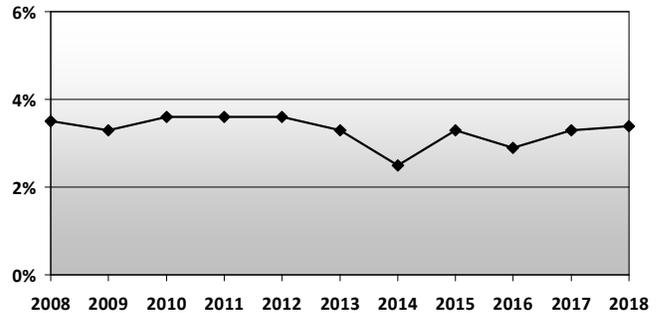

Formula:

$$\frac{\text{Capital Outlay from Operating Funds}}{\text{Net Operating Expenditures}}$$

Level of Capital Outlay
(as a % of Net Operating Expenditures)

Level of Capital Outlay:

Capital outlay includes expenditures for equipment in the operating budget, such as vehicles or computers. It normally includes equipment that will last longer than one year. Capital outlay does not include capital improvement expenditures for construction of capital facilities such as streets, buildings, fire stations, or schools.

The purpose of capital outlay in the operating budget is to replace worn equipment or add new equipment. The level of capital outlay is a rough indicator of whether or not the stock of equipment is being maintained in good condition. However, this indicator does not reflect the cost of routine maintenance and repair. If this indicator is declining in the short run of one to three years, it could mean that a locality's needs have temporarily been satisfied, because most equipment lasts more than one year. If the decline persists over three or more years, it can be an indication that capital outlay needs are being deferred, resulting in the use of obsolete and inefficient equipment and the creation of a future unfunded liability.

Trends:

The FY2017 Trends document was redefined to include capital outlay associated with the Central Automotive Maintenance Fund, the Technology Replacement Fund, and the Vehicle Replacement Fund to more accurately reflect capital expenditures. The eleven-year trend for this indicator depicts a narrow range between 2.5 percent and 3.6 percent, which is indicative of the consistency of meeting capital outlay requirements. A sharp drop in the measure, from 3.3 percent in 2013 to 2.5 percent in FY2014, was bookended by a return to 3.3 percent in FY2015. This one-year aberration was the result of departmental budget balancing maneuvers.

The Vehicle Replacement Fund, as noted earlier, was created in the FY13 budget as a budget reduction measure by reducing the unassigned General Fund balance level from 18 percent to 15 percent and assigning that difference to purchase Police vehicles, Fire apparatus, and school buses. Beginning in FY15, Police vehicles and Fire apparatus purchases remained in the Vehicle Replacement Fund but were funded with current General Fund revenues. The decision was made to keep these expenses in a separate fund within the Capital Project series of funds to allow for the carry-forward of unspent appropriations from one year to the next. This is particularly helpful with the acquisition of Fire apparatus as there are significant price fluctuations based on what types of equipment are scheduled to be replaced. In FY16, \$1.0 million was added to the Vehicle Replacement Fund as the start of a multi-year effort to fund school bus replacements with current revenues. This funding was increased to \$2.0 million in the FY17 budget and to \$2.5 million in the FY18 budget. These additions of funding are planned to continue over several years until a total of \$4.0 million a year is achieved.

The Central Automotive Maintenance (CAM) fund purchases and maintains vehicles for many of the County's agencies. CAM budgets for the replacement of vehicles for all other departments on an annual basis. In FY18, CAM spent \$2.3 million on the replacement of vehicles and other equipment.

The Technology Replacement Fund is an internal service fund for the purchase of computers, laptops, and other pieces of technology necessary for County employees to efficiently do their jobs while avoiding the budget swings created by one-time purchases. This fund was created in FY01 and was funded by eligible departments adding 1/3

of the costs of their equipment to a 'Technology Replacement' line item within the department's budget. These line items would be utilized as revenues to support the purchases from the Technology Replacement Fund. Over time as computer equipment became cheaper and started lasting longer, a fund balance was developed for the Technology Replacement Fund. During the economic downturn, this fund balance was utilized to offset the loss of revenues in the General Fund. In FY13, department contributions were eliminated and all expenses in the Technology Replacement Fund were supported by the balance of the fund. The FY15 budget included a transfer of \$1.0 million of ongoing revenues to reduce the use of the Technology Replacement Fund balance. Subsequent budgets have gradually added ongoing revenues in support of this fund's operations. The FY2018 budget assigned \$2.25 million of General Fund support for the \$2.4 million in planned expenditures.

The recent restatement of this indicator to include the other funds supported by General Fund revenues shows a more accurate reflection of the level of capital outlay expenses within General Government. It also shows a more consistent level of expenditure, indicative of the County's efforts to make sure a) employees have the right equipment to do their job, and b) County infrastructure is updated and maintained on a regular basis. As major steps have been made in executing a plan to fully fund programs to replace school busses, fire apparatus and technology equipment, and the overall percentage of funding for capital outlay has returned to historical levels, no warning trend is noted for this indicator.

WARNING TREND: Decreasing amount of depreciation expense as a percentage of total depreciable fixed assets for Enterprise Funds and Internal Service Funds.

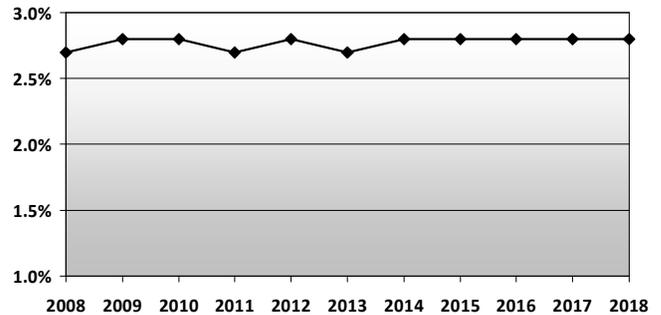

Formula:

$$\frac{\text{Depreciation Expense}}{\text{Cost of Depreciable Fixed Assets}}$$

Depreciation:

Depreciation is the mechanism by which a cost is associated with the use of a fixed asset over its estimated useful life. Depreciation is recorded only in the Enterprise and Internal Service Funds. Total depreciation expense typically remains a relatively stable proportion of the cost of the entity's fixed assets. The reason is that older assets, which are fully depreciated, are usually removed from service and newer assets take their place. If depreciation expenses start to decline as a proportion of the fixed asset cost, the assets on hand are probably being used beyond their estimated useful life.

Depreciation
(Depreciation Expense as a % of Assets)

Trends:

The chart above reflects two overall trends. First, with the implementation of GASB 34 in FY02, a change was required in the length of depreciation for Utilities infrastructure. The change increased the time for depreciating many of these assets and is based on an industry standard. (GASB 34 required standardization in many areas that encompass fixed assets of localities and one of the changes actually increased the term of depreciation for certain assets). Concurrent with this, the value of fixed assets arising from the County's Water Treatment Plant resulted in an increase in County "assets" of nearly \$92.0 million over a two-year period, although that increase was really of a one-time nature. Throughout the FY08 to FY18 time period, depreciation expenditures as a percentage of depreciable fixed assets have been consistent at either 2.7 percent or 2.8 percent.

What this graph shows clearly, is that with the standardization in the recordation of fixed assets that is the result of GASB 34, this indicator now reflects a higher level than was noted in the 1990's. This result was anticipated as assets of the Enterprise Fund continue to increase in value as the number of customers and the assets of the system continue to increase.

The consistency of this trend suggests that the County's depreciable assets are not currently being used past their depreciable useful life.

No warning trend is noted for this indicator.

WARNING TREND: A decreasing growth rate or a sudden increase in population.

Indicator:

Population of County Residents

Population:

Empirical evidence indicates that changes in population can have a direct effect on a locality's revenue because of the impact upon related issues, such as employment, income, and property value. A sudden increase in population can create immediate pressures for new capital outlays for infrastructure and for higher levels of service, particularly in the areas of Education, Public Safety and Recreation.

A locality faced with a declining population is rarely able to reduce expenditures in the same proportion as it is losing population. Many expenditures such as debt service, government mandates, and salaries are fixed and cannot effectively be reduced in the short run. In addition, because of the interrelationship between population levels and other economic and demographic factors, a decline in population tends to have a cumulative negative effect on revenues - the further the decline, the more adverse the effect on employment, income, housing and business activity.

Trends:

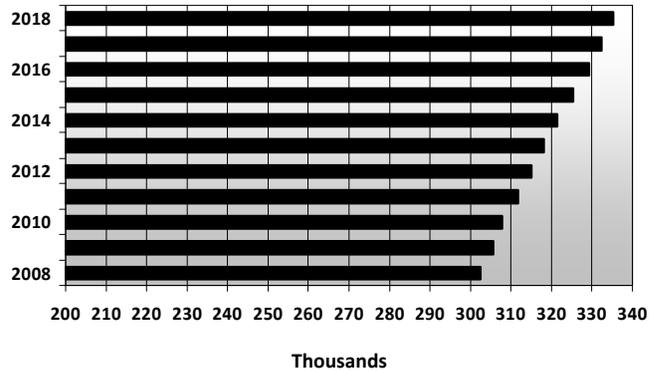

The County of Henrico has experienced a steady growth in population from 302,518 in FY08 to 335,283 in FY18, which represents an increase of 10.8 percent in this eleven-year time span, or an annual average increase of 1.0 percent per year. According to the 2000 United States Census, Henrico and Chesterfield were in competition for the largest population within the Central Virginia region with Henrico having a slightly higher total. According to the 2010 United States Census, Chesterfield County grew at a faster pace over the past decade, as they now have a higher population than Henrico.

Henrico continues to prepare for expanded and enhanced services to accommodate an increasing population as evidenced by construction of new facilities for education and recreation, as well as additional roads, fire stations and libraries, and by continuing to maximize the use of technology to enhance employee productivity and thereby minimize requirements for additional personnel.

As noted throughout this document, local economic growth is steady and producing incremental revenue growth for the County. However, Henrico County must continue to focus on finding ways to provide efficient services to its growing population at the lowest possible cost.

Due to consistent population growth, no warning trend is noted for this indicator.

Population

WARNING TREND: Decline in the level, or growth rate, of personal income per capita.

Indicator:

Per Capita Income

Source: Bureau of Economic Analysis

Per Capita Income:

Per capita income is one measure of a community's wealth. Credit rating agencies use per capita income as an important measure of a local government's ability to repay debt.

A decline in per capita income causes a drop in consumer purchasing power and can provide advance notice that businesses, especially in the retail sector, will suffer a decline that can ripple through the rest of the local economy. Changes in per capita income are especially important for communities that have little commercial or industrial tax base, because personal income is the primary source from which taxes can be paid.

Trends:

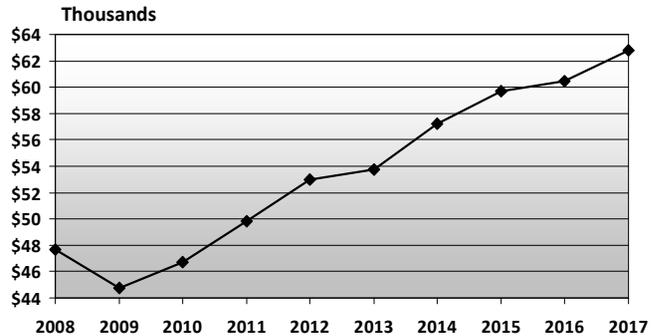

In the ten years depicted above, per capita income has increased by 31.7 percent from \$47,666 in 2008 to the \$62,778 reported for 2017. It should be noted that this indicator factors in increases to the County's population, which increased 9.9 percent between 2008 and 2017.

The per capita income statistics depicted above come from the United States Bureau of Economic Analysis. That source is based on income tax returns and therefore data is only available through the 2017 tax year.

The economic downturn of the late 2000's featured the bankruptcy of two Fortune 1000 companies headquartered in Henrico County, LandAmerica Financial and Circuit City, as well as the insolvency of one of the largest employers in the County, Qimonda AG, a number of high paying jobs were lost in Henrico during the economic downturn. The results can be seen in this indicator in 2009, as per capita income dropped 6.1 percent. Since that time, per capita income has grown each year from 2010 through 2017 and experienced a total increase of 39.1 percent.

With robust economic development activity continuing in Henrico it is anticipated that this indicator will continue the trend of consistent gains into the immediate future. As such, no warning trend is noted for this indicator.

Per Capita Income

WARNING TREND: Increasing number of public assistance recipients.

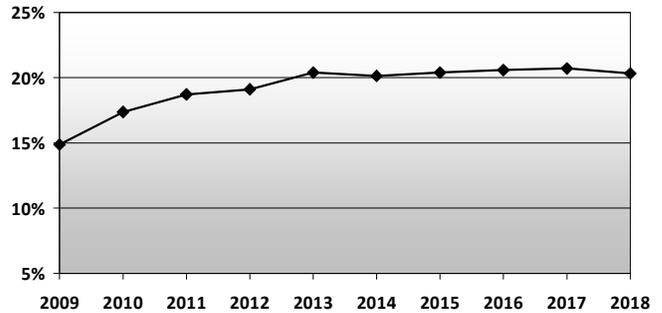

Formula:

$$\frac{\text{Public Assistance Recipients}}{\text{Total Population}}$$

Public Assistance Recipients
(as a % of Total Population)

Public Assistance Recipients:

This trend is closely associated with a decline in personal income. The indicator measures the number of public assistance recipients against the number of residential households in the County. An increase in the number of public assistance recipients can signal a future increase in the level and unit cost of services because of the relatively higher needs of low-income residents combined with their relative lack of personal wealth.

Trends:

This trend was restated with a new report from the Virginia Department of Social Services beginning with the 2016 Trends document. However, the data for this trend from this resource only goes back to 2009. Therefore, this document will only show a ten-year trend this year and will add data points in subsequent years.

The ten-year trend for this indicator features a series of sharp increases, from a 14.9 percent in FY09 to 20.4 percent in FY13, followed by a period of stability over the most recent five years. The number of public assistance recipients has been determined by obtaining the unduplicated number of people per year in the County receiving at least one of the following three types of benefits: Supplemental Nutrition Assistance Program (SNAP), Temporary Assistance to Needy Families (TANF), or Medicaid. On a national level, some of the corollary factors that could impact this ratio are limited availability of affordable housing and health care coverage, as well as, limited funds for public transportation.

The Medicaid population has increased dramatically over the past eleven years, which has driven the increase in the number of public assistance recipients. There are currently more than fifty different categories that qualify for Medicaid coverage. Recently, the State Medicaid unit was dissolved and all cases statewide were sent back to their local jurisdictions. In addition, the state deployed CoverVirginia, which is a processing unit for the State. Citizens now have the ability to file on-line as well as telephonic. This has allowed for ease in applying for benefits. There has also been a simplification of verifications needed to process cases utilizing federal data matches and self-declaration.

Henrico has an aging population that requires long-term nursing home care, which is very expensive for each recipient. The number of mental health patients has increased as well as the number of foster care children, which have also added to the Medicaid population. In addition, policy changes related to income can impact this indicator.

In Henrico County, since 2010, the Supplemental Nutrition Assistance Program (SNAP) (also recognized as the food stamp program) caseload has increased by 9.0 percent. After going up sharply from FY10 to FY13, the number of Henrico SNAP cases has decreased for five consecutive years. The number of Medicaid cases has increased by 37.0 percent in the same timeframe (Source: Virginia Department of Social Services).

In 2018, the Commonwealth of Virginia decided to opt into Medicaid expansion under the provisions of the Patient Protection and Affordable Care Act of 2010. It is estimated that in Henrico County, 11,430 additional residents would qualify, which would be an increase of approximately 25.0 percent from the number of recipients currently eligible (Source: Henrico Department of Social Services).

Though the number of unduplicated has levelled off in recent years, it remains over 20.0 percent. Due to the high level of public assistance recipients over this time period, with more to be added as a result of the Commonwealth's adoption of Medicaid expansion, a warning trend should continue for this indicator.

WARNING TREND: Declining or negative growth in market value of residential, commercial or agricultural property (constant dollars).

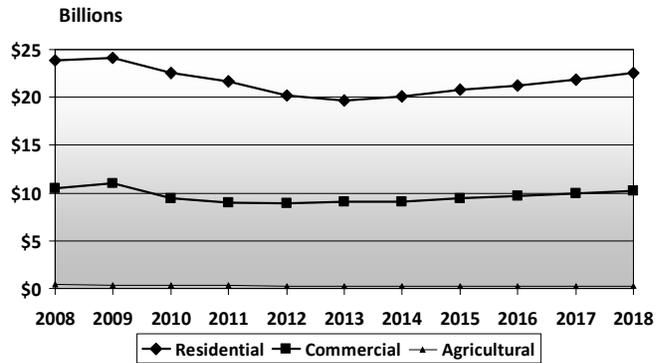

Formula:

Real Property Values (Constant Dollars)

Real Property Values:

Changes in real property values are important because most local governments depend on property taxes for a substantial portion of their revenues, and Henrico County is no exception. If a locality has a stable tax rate, the higher the aggregate property value, the higher the revenues generated. Localities experiencing rapid population and economic growth are also likely to experience growth in property values in the short-run. This is because in the short-run, the supply of housing is fixed and the increase in demand due to growth will force prices up.

Real Property Values
(In Constant Dollars)

The extent to which declining real property values affect a locality's revenues will depend on the locality's reliance on property tax revenue. The extent to which the decline will ripple through the local economy and affect other revenues is difficult to determine. However, all of the economic and demographic factors are closely related. Most probably, a decline in property values will not be a cause, but rather a symptom of other underlying problems.

Trends:

The above graph illustrates real property values in *constant* dollars for residential, commercial, and agricultural properties. As such, any increases in this indicator are reported after negating the "effect" of inflation. In looking at the historical Real Estate Tax rates for the County of Henrico, two facts are clear. First, *stability* is evident as the Real Estate Tax Rate was maintained at \$0.98/\$100 of assessed valuation for a period of *sixteen* consecutive years (CY80-CY95). The second notable trend is that since CY98, as property valuations have increased, the Board of Supervisors has mitigated these increases with prudent Real Estate Tax rate reductions that have been made without impacting the County's ability to meet debt obligations, capital infrastructure needs, and County operations, while also offering tax relief to County residents. This is a very difficult balancing act, but one that has been achieved because of the consistency of Board actions.

In looking at the more recent trends, from FY09 through FY13, constant dollar residential property values declined 18.6 percent while constant dollar commercial property values declined 18.9 percent from FY09 to FY12. Residential foreclosures and increasing office space vacancies significantly impacted the local real estate market during this time period. The County lost \$36.9 million in annual revenue from Real Estate Tax collections at that time, which was particularly challenging as this funding source represents one-third of the County's overall General Fund revenues. This trend has been reversed with constant dollar residential property values increasing by 14.9 percent from FY13 to FY18 while constant dollar commercial property values experienced an increase of 15.0 percent from FY12 to FY18. While increases in this indicator have been steady for 5 and 6 years, respectively, it is important to note that both residential and commercial property values, on a constant dollar basis, remain below FY08 levels.

In looking back at historical residential real estate price appreciation since the late 1800's, the average annual growth nearly always mirrors the annual inflation rate, as determined by the CPI. In fact, when adjusting real estate price appreciation by removing the inflation rate, and plotting these revised rates of appreciation on a line graph, the result is very close to a straight line with the exception of the "bubble" of the mid 2000's. As the real estate market continues to stabilize, it is anticipated that real estate price appreciation will increase at a comparable rate to inflation levels. As such, this indicator should reflect a "flattening out" effect long-term. As the County recently experienced

its fifth consecutive year of growth in total constant-dollar real estate property values, with similar growth expected in the foreseeable future, a recovery to pre-recession levels is expected. Therefore, no warning trend is noted for this indicator at this time.

WARNING TREND: Increasing market value of residential development as a percentage of market value of total development.

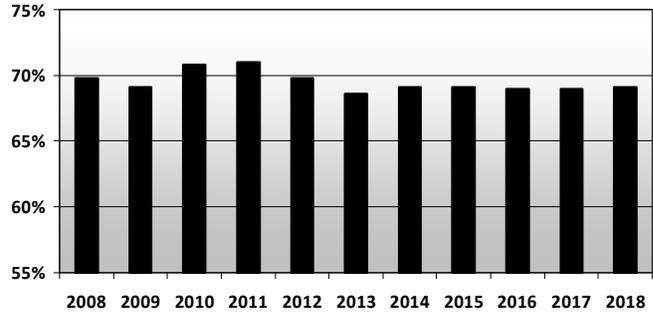

Formula:

$$\frac{\text{Market Value of Residential Development}}{\text{Market Value of Total Development}}$$

Residential Development:

The net cost of servicing residential development is generally higher than the net cost of servicing commercial or industrial development. This is because residential development usually creates more expenditure demands (generally in the area of Education) than revenue receipts. The ideal condition would be to have sufficient commercial or industrial development to offset the costs of the residential development.

Residential Development
(as a % of Total Property)

The location of new residential development is also important. Houses built on the outer fringe of a community can impose a far greater initial cost to local government than houses built within developed areas. This is because the locality must provide capital items such as streets, sewer lines, water mains, education facilities, and fire stations to service the new development. The extent to which new residential development affects the financial condition of a particular community will depend on the community's economy, tax structure, and expenditure profile. The County has determined that a 70.0 percent level of residential valuation is optimal.

Trends:

Residential development as a percentage of total property market value in Henrico County has ranged from a low of 68.6 percent in 2013, to a high of 71.0 percent in 2011. This indicator increased each year from 2002 to 2007, going from 66.3 percent in 2002 to 70.6 percent in 2007. In 2008, the indicator fell below the benchmark of 70.0 percent to 69.8 percent and in 2009 it dropped to 69.1 percent. In 2010, the indicator rose to 70.8 percent, increased again in 2011 to 71.0 percent, before again falling below the 70.0 percent threshold, to 69.8 percent in 2012 and 68.6 in 2013. In 2014, the indicator increased slightly to 69.1 percent and has remained within 0.1 of this level through 2018.

Market value is slightly different from assessed value in that market value includes the value of land use properties that would be deducted when assessing the property for tax purposes. The County is required to report market value to the State. The indicator above does not reflect inflation-adjusted values.

After the residential real estate boom from 2004 to 2007, in which increases in residential market values outpaced increases in the commercial segment of the market, in 2008, increases in commercial values remained strong, but residential values began to show signs of slowing down. As a result, the Residential Development indicator fell to 69.8 percent in 2008. In 2009, the Residential Development indicator fell again, to 69.1 percent, as residential real estate valuation declined by 0.3 percent and commercial values increased 3.1 percent. In 2010, because of sharp increases in vacant commercial real estate across the County, commercial valuations declined 13.0 percent as compared to a decline of 5.4 percent in residential real estate valuations. This large differential carried the Residential Development indicator to 70.8 percent. Commercial valuations declined 1.5 percent in 2011, twice the decline of residential valuations that dropped 0.8 percent, increasing the indicator to 71.0 percent, the highest level in the eleven years examined. Slight improvement in the commercial real estate market in 2012 resulted in an overall increase of 0.7 percent in values, while residential real estate values dropped just under 5.0 percent. As such, the indicator fell back below the 70.0 percent threshold, to 69.8 percent. In 2013, residential values declined 1.3 percent and commercial values grew more than 4.1 percent. The indicator increased in 2014 for the first time since 2008. This was caused by growth at 4.4 percent growth in residential assessments and 2.1 percent appreciation in, commercial values. Although the indicator has remained relatively flat since 2014, it is important to note that both

residential and commercial values experienced an increase as discussed in the Real Property Values trend.

As the overall real estate market improves and stabilization becomes more and more evident, there is enhanced confidence that growth will continue in both residential and commercial valuations going forward. As such, no warning trend is noted for this indicator at this time.

WARNING TREND: Increasing rate of local unemployment or a decline in number of jobs provided within the community.

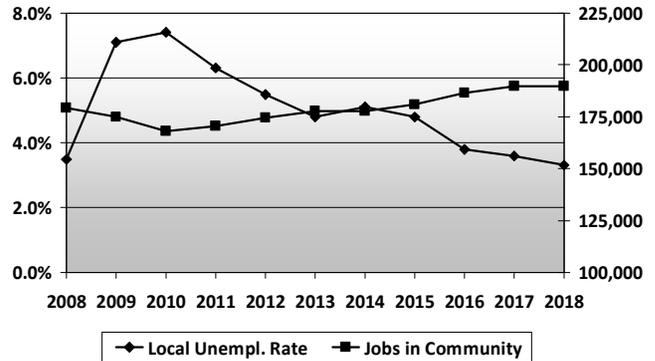

Indicators:

Local Unemployment Rate and Number of Jobs within the Community

Employment Base:

Employment base considers both the unemployment rate and the number of jobs because they are closely related. This indicator is significant because it is directly related to the levels of business activity and personal income. Changes in the number of jobs provided by the community are a measure of and an influence on business activity. Changes in the rate of employment of the community's residents is related to fluctuations in personal income and, thus, is a measure of and an influence on the community's ability to support its local business sector.

Employment Base

If the employment base is growing, if its diversity provides a cushion against short-run economic fluctuations or a downturn in one sector, and if the employment base provides sufficient income to support the local business community, then it will have a positive influence on the locality's financial condition. A decline in employment base as measured by jobs or lack of employment can be an early warning sign of declining economic activity and thus, governmental revenues. The data source for this information is the Virginia Employment Commission.

Trends:

I. Unemployment:

Henrico County's unemployment rate, in the eleven-year period above, showed a dramatic increase from 3.5 percent in 2008 to 7.4 percent in 2010. This mirrored a deep national economic recession. The effects were felt locally through several major business closings – most notably LandAmerica Financial, Circuit City, and Qimonda AG – as well as jobs lost in the construction and manufacturing sectors. Since 2010, the rate has steadily dropped as new jobs have consistently matriculated back into Henrico County. The unemployment rate of 2018 is 3.3 percent, which is the lowest point in this 11-year analysis. This rate is also below Henrico's historical average of 3.7 percent dating back to 1988, representing continued improvement from where the County was just a short time ago. With the overall downward trend since 2010, there is no warning trend for this indicator.

II. Number of Jobs:

From 2008 to 2010, the number of jobs in Henrico decreased by 11,284, or 6.3 percent. Since 2010, the County has added back 21,430 jobs, which is a 12.7 percent increase. With a clear upward trend in the number of jobs and an established pattern of economic development accomplishments, there is no warning trend for this indicator.

WARNING TREND: Decline in business activity as measured by retail sales and gross business receipts.

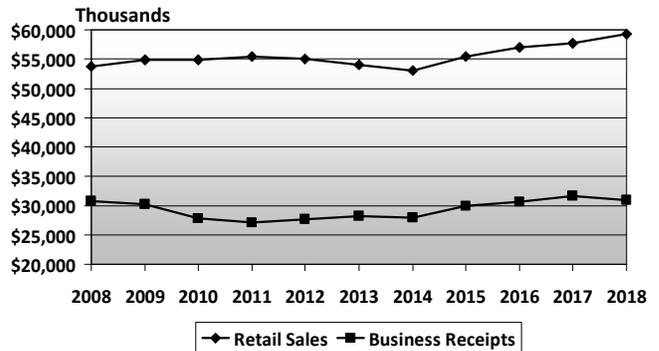

Indicators:

Local Retail Sales Tax and Business and Professional License (BPOL) Tax Receipts

Local Sales Tax and Business and Professional License Tax (BPOL) Receipts:

The level of business activity affects a locality's financial condition in two ways. First, it directly affects revenue yields as sales taxes and gross receipts taxes are products of business activity. Second, the effect of these indicators may be indirect to the extent that a change in business activity affects other demographic and economic areas such as employment base, personal income or property values. Changes in business activity also tend to be cumulative. A decline in business activity will tend to have a negative impact on employment base, personal income and/or commercial property values. This in turn can cause a decline in local revenues generated by businesses.

Local Retail Sales and Business Receipts
(In Constant Dollars)

Trends:

I. Local Retail Sales Tax Receipts:

The above graph indicates that local sales tax receipts, in constant dollars, have grown markedly for four consecutive years, as the growth in this measure has outpaced inflation by a combined 11.8 percent from FY14 to FY18. This represents a sharp rebound from three consecutive years of decline from FY11 to FY14, which was a period of time when sales tax receipts were relatively constant but failed to grow at or near the level of inflation. Overall, the trend has risen by 10.3 percent over the 11-year measurement timeframe.

With a rare deflationary environment, coupled with slight growth in local sales tax collections, inflation-adjusted sales tax collections posted a 2.1 percent growth, despite the economic downturn, in FY09. This occurred due to the defeasance of the Short Pump Town Center CDA that fiscal year, as well as the successful implementation of the "Henrico, VA" initiative, in which the majority of "Richmond, VA" addresses were changed to "Henrico, VA" to correct revenue miscoding that misdirected local tax revenue to neighboring jurisdictions.

Throughout the eleven-year period, the County has maintained the lion's share of regional taxable sales and continues to strengthen its retail market. In fact, in current dollars, local sales and use taxes increased in FY15, FY16, FY17, and FY18 at year-over-year, at rates of 4.7 percent, 6.6 percent, 3.8 percent and 5.6 percent, respectively. Sales and use tax receipts will continue to be monitored closely but no long-term warning trend is noted for this indicator.

II. Local Business and Professional License (BPOL) Tax Receipts:

Like local sales tax revenues, FY08 BPOL tax receipts (constant dollars) fell sharply due to the struggling economy and unusually high inflation. While this indicator reflects a significant decrease, real unadjusted BPOL tax revenue only reflected a slight decrease of 1.0 percent. In FY09, inflation adjusted BPOL tax receipts declined by 1.8 percent and real unadjusted BPOL tax revenue declined by 3.2 percent. In FY10 inflation adjusted BPOL tax receipts declined by 8.2 percent, easily the largest decline in the eleven-year period examined, and real unadjusted BPOL tax revenue declined by 7.2 percent. In FY11 inflation adjusted BPOL tax receipts declined by 2.8 percent, but real unadjusted BPOL tax revenue increased slightly, by 0.7 percent. From FY09 to FY11, a number of businesses in the County were forced to close their doors.

As new businesses have entered the County and joined the existing diversified business community, BPOL tax receipts are again reflecting growth after the years of decline. In fact, in FY12 and FY13, inflation-adjusted BPOL tax revenue grew 2.2 percent each year. BPOL tax receipts in FY14 experienced an inflation-adjusted decline of 1.3 percent. Business receipts in FY15 grew by 7.4 percent in constant dollars, the highest rate since before the economic recession. While not nearly as substantial as FY15, business receipts grew 2.1 percent in FY16 and 3.5 percent in FY17. To enhance the County's economic development efforts and low business tax environment, the Board of Supervisors doubled the exemption for businesses to pay BPOL taxes from \$100,000 to \$200,000 as part of the FY18 budget. This tax cut caused a 2.3 percent decline in BPOL tax receipts, on a constant dollar basis, in FY18. On a current dollar basis, BPOL receipts grew by 0.5 percent despite the doubling of the exemption.

Even with this increase and another increase in the exemption for businesses, from \$200,000 to \$300,000, in the FY19 budget, it is anticipated that BPOL receipts will continue to grow with the economy. Just as with sales tax collections, no long-term warning trend is noted.

WARNING TREND: Decline in business activity as measured by commercial acres developed and market valuation of business property.

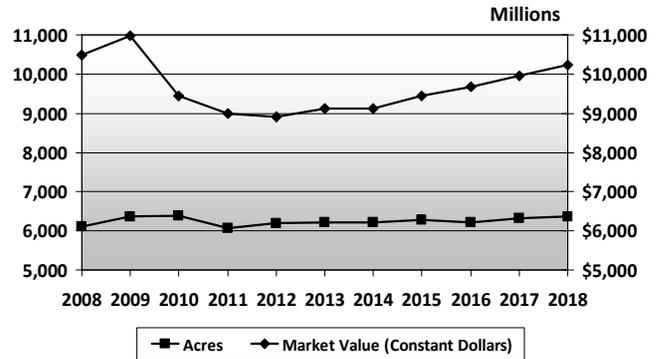

Indicators:

*Number of Commercial Property Acres and
Market Value of Business Property*

Business Activity – Commercial Acres and Market Value of Business Property:

The level of business activity affects a locality's financial condition in two ways. First, it directly affects revenue yields to the extent that the number of business acres and value of business property may be considered products of business activity. Second, the effect of these indicators may be indirect to the extent that a change in business activity affects other demographic and economic areas such as employment base, personal income or property values. Changes in business activity also tend to be cumulative. A decline in business activity will tend to have a negative impact on employment base, personal income or property value. This in turn, can cause a decline in local revenues generated by businesses.

Commercial Acres and Market Value of Business Property

Trends:

I. Business Acres:

As shown in the graph above, business acreage steadily increased from 2008 to 2010, with 6,118 acres in 2008 growing to 6,393 in 2010. In 2011, business acreage dropped substantially to 6,064, but this is entirely due to a change in the calculation methodology for land use acreage by the Department of Planning, to be more compatible and consistent with the County’s technological systems. The County, in fact, added 33 acres in 2011. Business acreage is defined as “developed commercial property for office and retail use.” The data reveals that in the eight years from 2007 to 2010 and from 2011 through 2015, the average annual increase in the number of business acres developed was nearly 62.2. There was a reduction to 6,217 in 2016, caused by an adjustment to the Existing Land Use GIS layer that refined what was considered developed commercial property. The total business acreage for 2017 was 6,331 or 114 higher than 2016. Modest growth continued in 2018 as 29 additional acres were added. Outside of years where there were changes to the way business acreage is defined and collected, Henrico has seen steady increases in acreage.

Commercial development and concentration is a key component to maintaining a low Real Estate Tax rate and ensuring that Henrico continues to increase the number of jobs in the community. The commercial component of the Real Estate Tax base can subsidize the costs incurred by residential development – particularly in Education.

II. Market Value of Business Property:

The eleven-year trend for this indicator, *in constant dollars*, starts at \$10.5 billion in CY08 and rises to \$11.0 billion in CY09, before falling in each of the next three years due to recessionary contractions. After bottoming out at \$8.9 billion in CY12, it started climbing again and over the next six years, reaching \$10.2 billion in CY18, an increase of 11.8 percent. The value of commercial properties is prone to devaluation when the supply of those properties is greater than the demand, as was the case during the housing bubble. This was evident in 2010, the third year of the most recent recession and the supply of vacant office and retail space increased significantly due to several businesses closing their doors. The result was an overall reduction in the commercial tax base of more than 13.0 percent in FY10. Another decrease in the commercial tax base of 1.5 percent occurred in CY11 due to the continued elevated supply of vacant office space. In CY12, the commercial market improved slightly, and values increased 0.7 percent, though not enough to keep up with inflation, as reflected in the indicator above. Commercial values

increased greater than inflation in CY13 at 3.3 percent, and increased only barely higher than inflation in CY14 with growth of 0.02 percent. Growth continued in CY15, CY16 and CY17 as commercial values increased 5.1 percent, 3.6 percent, and 4.1 percent, respectively. CY18 marks the sixth consecutive year of growth with commercial values increasing 2.9 percent on a constant dollar basis. While these gains show continued improvement in the County's business property market values, it must be noted that this indicator has not fully rebounded to the 2009 level.

Looking into the future, the market value of commercial real estate will continue to rebound as jobs continue matriculating back into the County. Due to an environment of continuing growth, no warning trend is noted.
